

RPM-04 PDU Management Software User Manual

UM-RPM-04-1P-3METER-Q218V5

RP series PDU: Single Phase

LEGAL INFORMATION

First English printing, January 2018

Information in this document has been carefully checked for accuracy; however, no guarantee is given to the correctness of the contents. The information in this document is subject to change without notice. We are not liable for any injury or loss that results from the use of this equipment.

SAFETY INSTRUCTIONS

Please read all of these instructions carefully before you use the device. Save this manual for future reference.

- Unplug equipment before cleaning. Don't use liquid or spray detergent; use a moist cloth.
- Keep equipment away from excessive humidity and heat. Preferably, keep it in an air-conditioned environment with temperatures not exceeding 40° Celsius (104° Fahrenheit).
- When installing, place the equipment on a sturdy, level surface, to prevent it from accidentally falling and causing damage to other equipment or injury to persons nearby.
- When the equipment is in an open position, do not cover, block or in any way obstruct the gap between it and the power supply. Proper air convection is necessary to keep it from overheating.
- Arrange the equipment's power cord in such a way that others won't trip or fall over it.
- If you are using a power cord that didn't ship with the equipment, ensure that it is rated for the voltage and current labelled on the equipment's electrical ratings label. The voltage rating on the cord should be higher than the one listed on the equipment's ratings label.
- Observe all precautions and warnings attached to the equipment.
- If you don't intend on using the equipment for a long time, disconnect it from the power outlet to prevent being damaged by transient over-voltage.
- Keep all liquids away from the equipment to minimize the risk of accidental spillage. Liquid spilled on to the power supply or on other hardware may cause electrocution, fires, and other damage.
- Only qualified service personnel should open the chassis. Opening it yourself could damage the equipment and invalid date its warranty.
- If any part of the equipment becomes damaged or stops functioning, have it checked by qualified service personnel.

What the warranty does not cover

- Any product, on which the serial number has been defaced, modified or removed.
- Damage, deterioration or malfunction resulting from:
 - Accident, misuse, neglect, fire, water, lightning, or other acts of nature, unauthorized product modification, or failure to follow instructions supplied with the product.
 - Repair or attempted repair by anyone not authorized by us.
 - Any damage of the product due to shipment.
 - Removal or installation of the product.
 - Causes external to the product, such as electric power fluctuation or failure.
 - Use of supplies or parts not meeting our specifications.
 - Normal wear and tear.
 - Any other causes which does not relate to a product defect.
- Removal, installation, and set-up service charges.

Regulatory Notices Federal Communications Commission (FCC)

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

Any changes or modifications made to this equipment may void the user's authority to operate this equipment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Re-position or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

UNPACKING

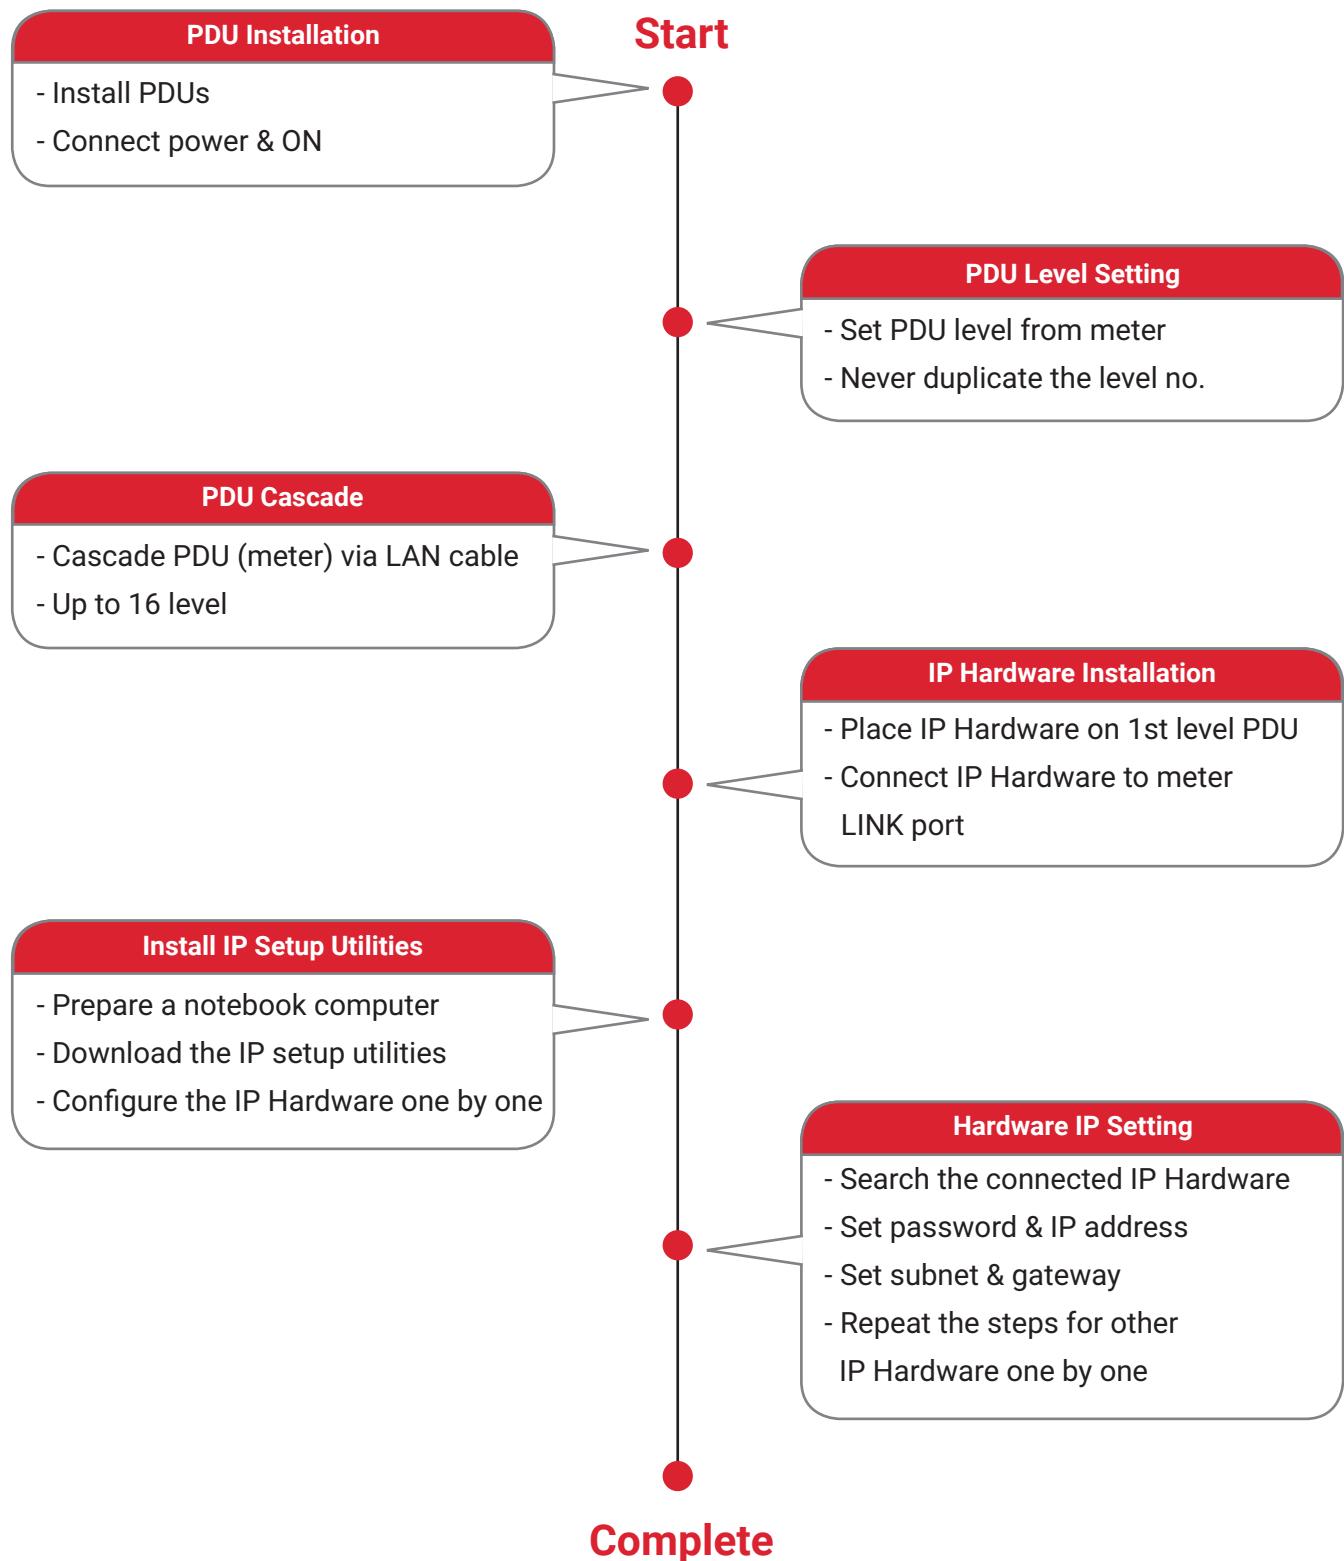

The equipment comes with the standard parts shown on the package contents. Check and make sure they are included and in good condition. If anything is missing, or damage, contact the supplier immediately.

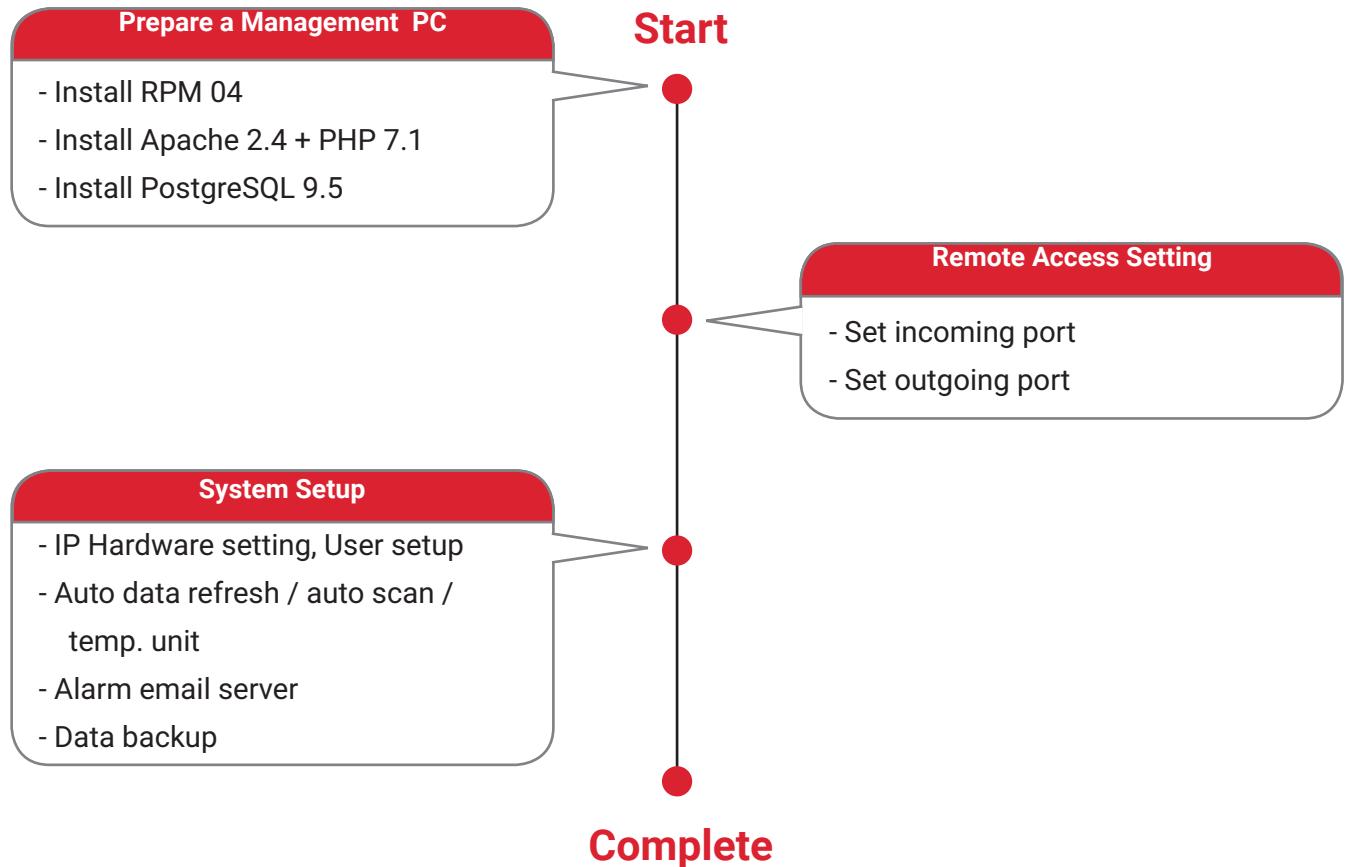

⚠ All electrical power and power control wiring must be installed by a qualified electrician and comply with local and national regulations.

⚠ Don't exceed the outlet, branch or phase limitations

POWER ON

- Connect the PDU into an appropriately rated receptacle
- When the PDU is power on, the LED display will light up. That means all outlets are activated
- Keep the equipments in the power off position until it is plugged into the PDU

Part I. RP Meter

1.1 METER KEY FEATURES

Four intelligent PDU series covering single & three phase equipped with RP Meter:

- Monitored PDU:**
- (1) RP1000 PDU
 - (2) RP1500 PDU - Outlet Measurement

- Switched PDU:**
- (3) RP1000 PDU
 - (4) RP3000 PDU - Outlet Measurement

RackPower	Monitored PDU	Switched PDU		
	RP1000	RP1500	RP2000	RP3000
Outlet Amp + kWh Measurement				
Outlet Switch ON / OFF				
Field Replaceable Meter				
2.8" Color LCD (featured w/ Touchscreen)				
Circuit / Phase Amp + kWh Measurement				
Support Single & Three Phase PDU				
Phase Balance % (3 Phase PDU only)				
Temp-Humid Sensor port x 2				
16 PDU Levels in Single Daisy Chain				
One IP Access up to 16 PDU Levels				
Tool-less Mounting for Vertical PDU				
SNMP Capability v2 / v3				
Free Management Software (via PDU IP Hardware, NPDH)				

RP series PDU is equipped with a highly advanced component - **RP Meter** .

- Single & Three Phase PDU can be inter-cascaded in a single daisy chain.
- Simply connect 1 x IP Hardware to access up to 16 PDUs to save IP network address.
- SNMP Capability v2 / v3 via IP Hardware
- Built-in buzzer will sound when circuit or bank Amp over alarm setting.
- Field replaceable design allows meter replacement without PDU power interruption.

1 Cascade port
Up to 16 PDU Level

2 Sensor port x 2
- Temp. Sensor
- Temp. + Humid. Sensor

3 2.8" color LCD
Featured w/ Touchscreen

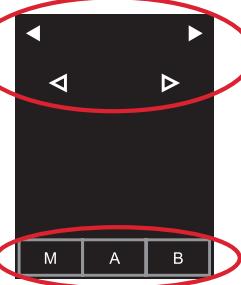

4 Reset button
To re-power the meter if necessary, this won't cause any change on settings and memories.

1.3 METER (PDU) CASCADE

- The PDU can be cascaded up to 16 levels
- For IP PDU access simply connect 1 x IP Hardware - **NPDV**
- 1 x IP Hardware allows access to 16 levels
- Single & 3 Phase PDU can be inter-cascaded in the single daisy chain

To setup page for **PDU level setting** as below:

1.4 IP HARDWARE INSTALLATION

IP Hardware Access to 16 PDU Levels

Patented IP Hardware provides IP remote access to the PDU's by a true network IP address chain. Only 1 x IP Hardware allows access to max. 16 PDU's in a single daisy chain - which is a highly efficient application for saving not only the IP remote accessories cost, but also the true IP addresses required on the PDU management.

Hot-Pluggable design facilitates the IP Hardware installation. Simply integrate the IP Hardware to the 1st PDU, then the entire daisy chain group can be remote over IP.

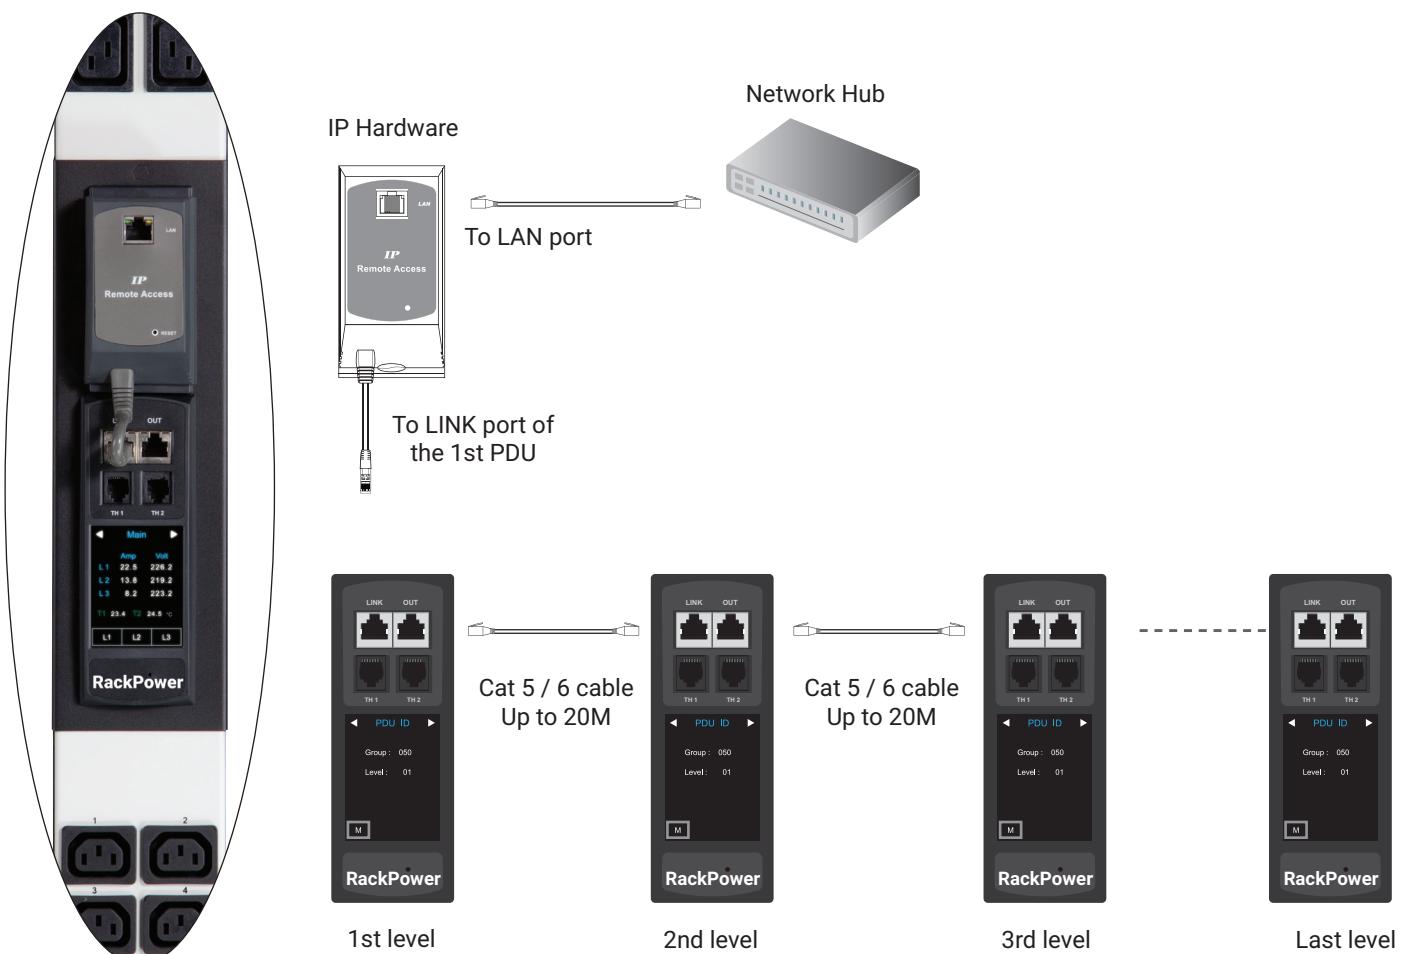

IP Hardware for vertical PDU

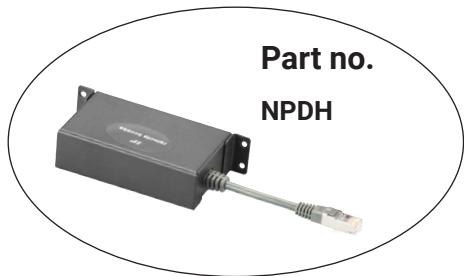

- SNMP capability v2 / v3

Installation steps:

- Slide and fix the IP Hardware on the plate over the meter
- Plug its RJ-45 connector into the LINK port of the **1st level PDU** meter
- Connect IP Hardware to network device via CAT. 5 / 6 cable

1.4 IP HARDWARE INSTALLATION

Part no.

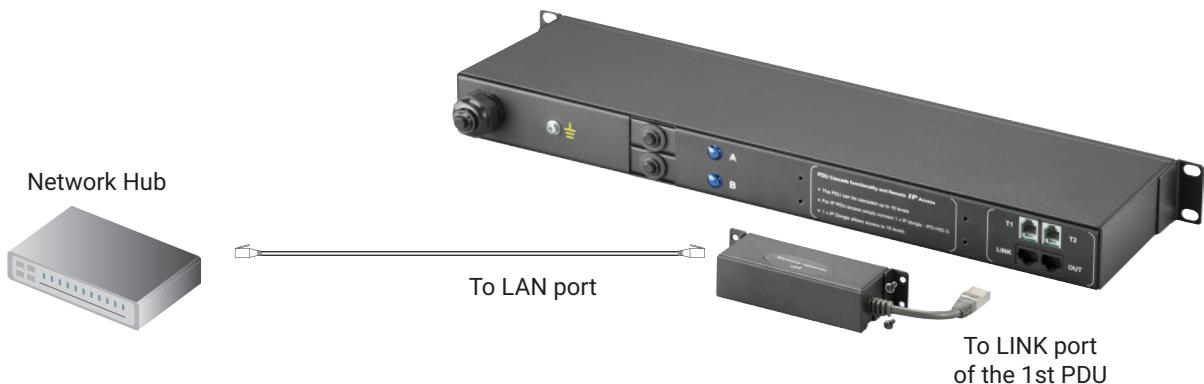

NPDH

IP Hardware for rackmount PDU

- SNMP capability v2 / v3

Installation steps:

- Fix the IP Hardware on the rear side of rackmount PDU with 4 screws
- Plug its RJ-45 connector into the LINK port of the **1st level PDU** meter
- Connect IP Hardware to network device via CAT. 5 / 6 cable

1.5 METER SYSTEM TIMER

Each PDU comes with a system timer to show the current date & time.

It will be synchronized with the system time of the management PC under circumstances below:

- When the PDU connected to RPM-04 at the first time
- When the PDU is reconnected to RPM-04 after disconnection
- At 00:00:00 (hh:mm:ss) daily

The system timer will be frozen when the PDU is powered OFF.

1.6 OPTIONAL ACCESSORY

Temp. / Temp. + Humidity Sensor

RP Meter provides 2 sensor ports for Temp. & Humidity monitoring. Once sensors connected, the reading will display in the meter.

- Plug n Play
- Sensor with 2M or 4M cord
- Low profile design with magnetic base for easy affixing to the rack

Temp. & Humid. Sensor

Part no.:

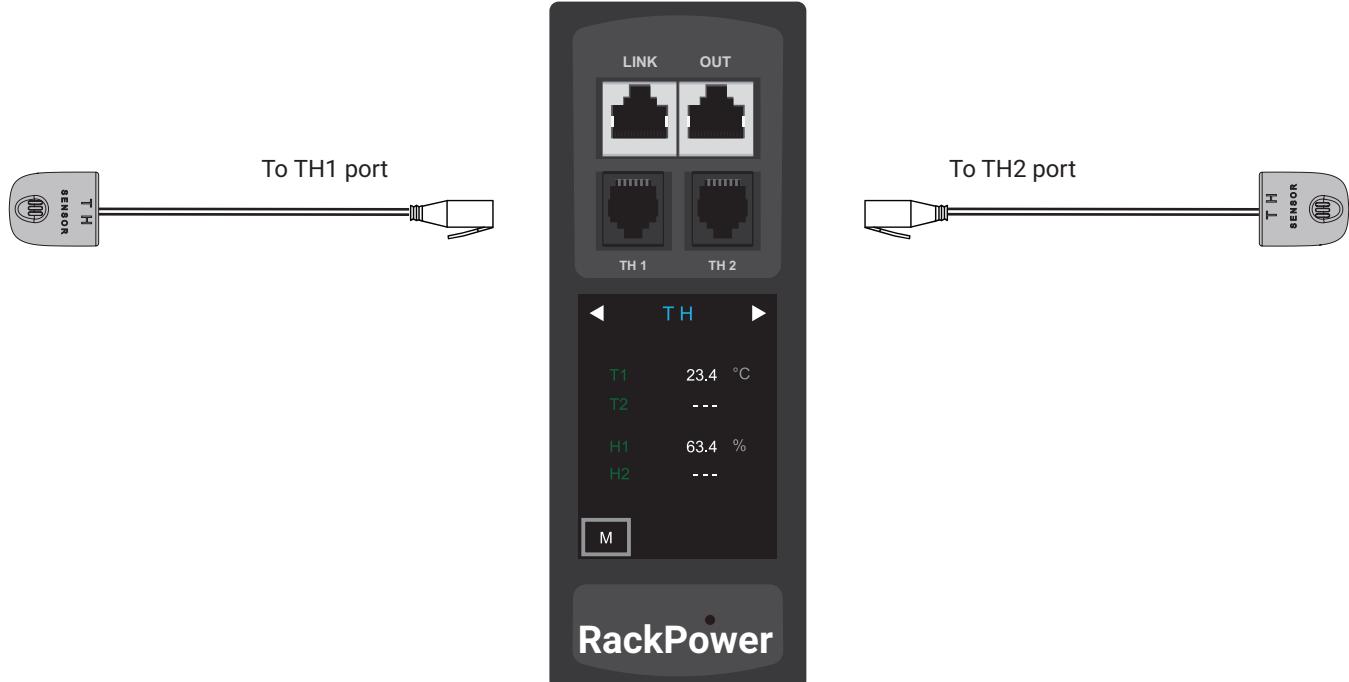

NPS2 (2M cord)

Temp. Sensor

Part no.:

NPS1 (2M cord)

1.6 OPTIONAL ACCESSORY

Temp. / Temp. + Humidity Sensor

	Temp. & Humid. Sensor	Temp. Sensor
Part no.	IG-TH01=NPS2	IG-T01=NPS1
Temperature Sensitivity	Range	0 to 80°C (32 to 176°F)
	Accuracy	±1.0°C typical (±2°F)
	Resolution	0.1°C (0.2°F)
	Response Time	5 to 30 sec
Relative Humidity Sensitivity	Range	0 to 100% R.H
	Accuracy	0 to 100, ±8.0% R.H 20 to 80, ±4.5% R.H.
	Resolution	1% R.H.
	Response Time	8 sec
Power Requirement	Voltage	12VDC, powered by sensor port
	Current Consumption	20mA
	Power consumption	0.24 Watt
	Power on indicator	Red LED
Housing	Chassis & Cover	plastic
	Color	Dark gray
	Installation	Magnetic base for unrestricted installation
Cable	Cable Length	TH sensor w/ 2m cable (standard) TH sensor w/ 4m cable (option)
	Cable Specification	4-wired 3.5mm to RJ11
	Cable Color	Black
Environmental	Operating	0 to 80°C Degree
	Storage	-5 to 80°C Degree
	Humidity	0~100%, non-condensing
Dimensions	Product	30L x 25Wx 18H mm
Weight	Net	10g
Compatibility	RackPower	Single & 3 Phase RP1000 / RP2000 / RP1500 / RP3000 series PDU
	InfraSolution	X-2000 series
	InfraGuard	Rack sensor system
Safety Regulatory	FCC & CE certified	
Environmental	RoHS2 & REACH compliant	

1.6 OPTIONAL ACCESSORY

Extended Door-mount Amp / Temp. Display

External Door Mount PDU Display (NRED) provides RJ-11 port x 2 for PDU amp. & Temperature monitoring. Once connected, the reading of PDU amp. and the temp. showRP2000 in the external door mount display.

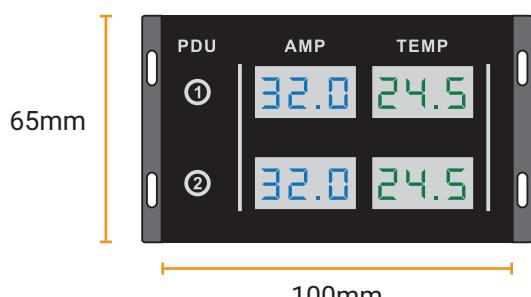

- Plug n Play
- Support two PDU's display amp. and temp.
- Adjustable Mounting Kit for easy installation to rack door
- Bundled 3m RJ-11 cable x 2

Package Contents

- Extended Door-mount Amp. / Temp. Display x 1
- Bundled 3m RJ-11 cable x 2
- Screw & tape not provided

Product Dimension

Packing Dimension

- 350(W) x 165(L) x 35(H) mm

Weight

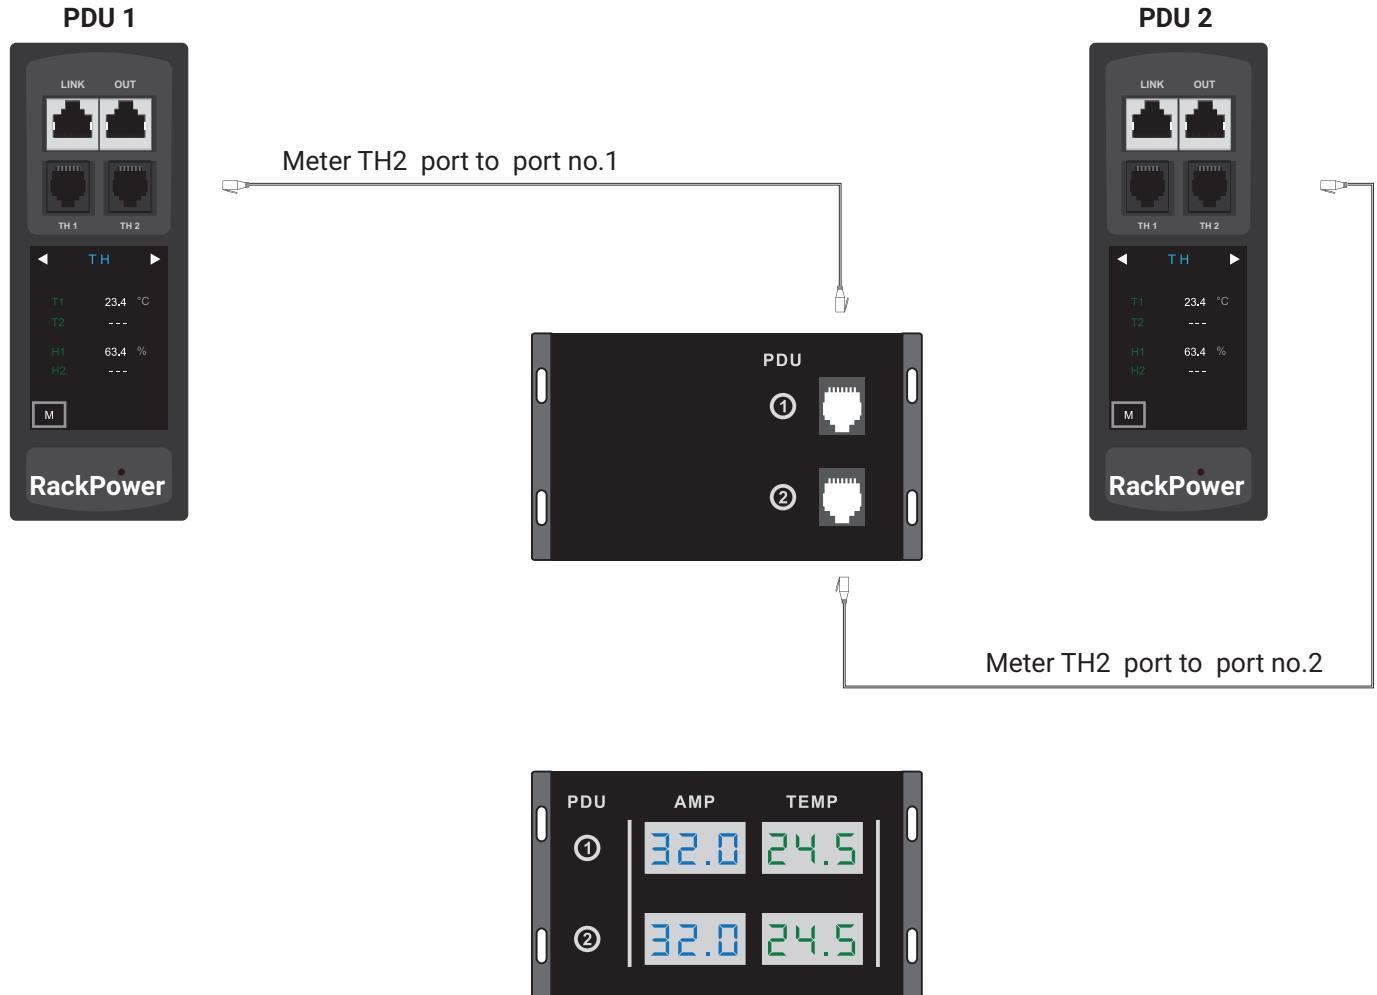

- Net : 0.25kg
- Gross : 0.48kg

1.6 OPTIONAL ACCESSORY

Extended Door-mount Amp / Temp. Display

Installation steps:

- Connect the meter and extended door-mount PDU display via a bundled RJ-11 cable
- Only meter TH2 port supports the door-mount PDU display
- The display on the door top corner position is recommended
- Fix the display on the rack door by screw or tape

Part II. Software

2.1 KEY FEATURES

RackPower Manger RPM-04 is a free and powerful user friendly PDU management software. The Windows based software consolidates management of max. 800 Dual Feed single phase , single & 3 Phase PDUs via 50 IP Hardwares.

5 concurrent user access are bundled for achieving the demand of multi-user / multi-tasking in nowadays' time-sharing data center operation.

RackPower RPM-04

Features		
Capacity	IP Hardware Group (Just 1 for 16 PDU levels)	50
	PDU number	800
	Concurrent Users	5
Enhanced Features	Outlet Level kWh & Amp Measurement	✓
	Outlet Scheduling	✓
	Energy Consumption (kWh) Monitoring	✓
	Apparent Power (kVA) Monitoring	✓
	Power Factor Measurement	✓
	Circuit Breaker (MCB) Monitoring	✓
Basic Features	Aggregate Current (Amp) Monitoring	✓
	Individual Outlet Switch ON/OFF	✓
	Temp-Humid Monitoring	✓
	Alarm Threshold Setting	✓
	Rising Alert Threshold Setting	✓
	Remote Access via Web	✓
	Graphic User Interface	✓
	Reporting	✓
PDU Series Support	Single & 3 Phase RP1000 Monitored PDU	✓
	Single & 3 Phase RP1500 Monitored PDU (Outlet Measurement)	✓
	Single & 3 Phase RP2000 Switched PDU	✓
	Single & 3 Phase RP3000 Switched PDU (Outlet Measurement)	✓
	Single Phase Dual Feed RP1000 Monitored PDU	✓
	Single Phase Dual Feed RP1500 Monitored PDU (Outlet Measurement)	✓
	Single Phase Dual Feed RP2000 Switched PDU	✓
	Single Phase Dual Feed RP3000 Switched PDU (Outlet Measurement)	✓

2.2 IP HARDWARE CONFIGURATION

 The following steps show the static IP setting only. For DHCP setting, please refer to < 7.3 > DHCP Setting

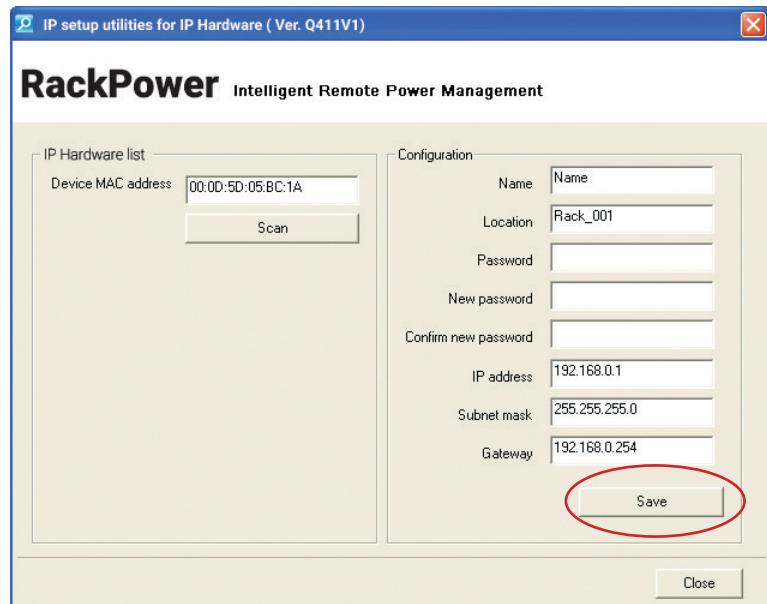

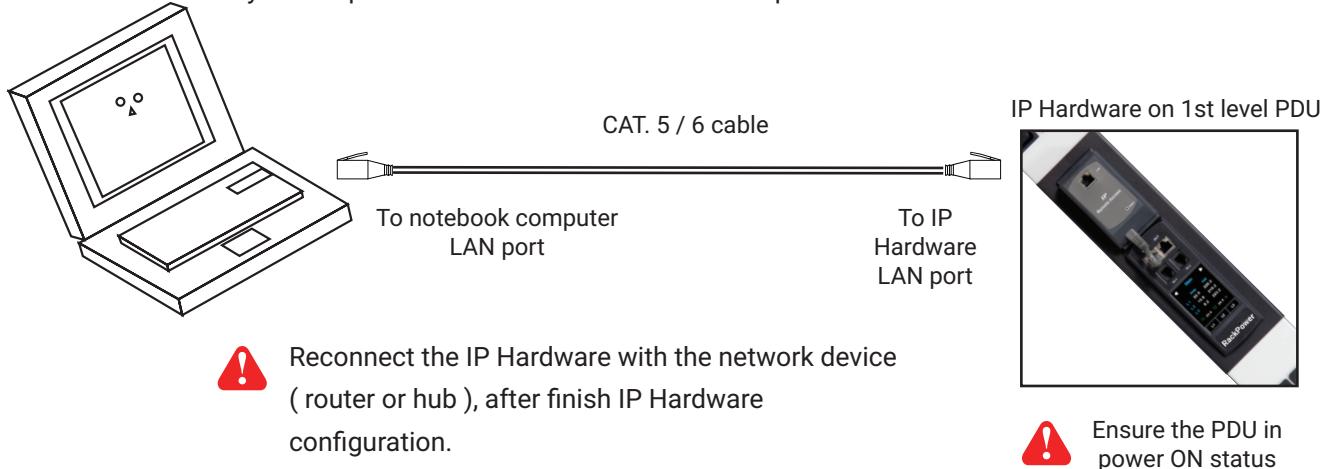

After the completion of IP Hardware connection, please take the following steps to configure the IP Hardware:

Step 1. Prepare a notebook computer to download the IP setup utilities from the link:

<https://lp.schroff.nvent.com/en/rackpower-support>

Step 2. Double Click the `IPHardwareSetup.msi` and follow the instruction to complete the installation

Step 3. Go to each first level PDU with the notebook computer & a piece of CAT. 5 / 6 cable to configure the IP Hardware by IP setup utilities as below. Please take the procedure for all IP Hardwares **ONE BY ONE**

Write down the new IP address & password for < Setup > purpose, refer to < 3.1 > System Setup

Step 4. Click “Scan” to search the connected IP Hardware

Step 5. Enter device name in “Name” (min. 4 char. / max. 16 char.). Default is “Name”

Step 6. Enter device location in “Location” (min. 4 char. / max. 16 char.). Default is “Rack_001”

Step 7. Enter password in “Password” for authentication (min. 8 char. / max. 16 char.) Default is “00000000”

Step 8. Enter new password in “New password” (min. 8 char. / max. 16 char.)

Step 9. Re-enter new password in “Confirm new password”

Step 10. Input the desired “IP address” / “Subnet mask” / “Gateway”, then Click “Save” to confirm the input

The default IP setting is as below: IP address: 192.168.0.1

Subnet mask: 255.255.255.0

Gateway: 192.168.0.254

2.3 HARDWARE REQUIREMENTS OF THE MANAGEMENT PC

Please prepare a management PC with the hardware requirements as below for RackPower Manager - RPM-04

Recommended hardware requirements:

- Processor: Dual Core 2GHz or above
- Memory: 4GB RAM
- Available Disk Space: 500GB
- Display: For the best view, display resolution 1920 x 1080 recommended

- The default service port of web server is 80.
 - A dedicated PC to run RackPower Manager - RPM-04 is recommended.
 - Make sure the management PC is POWER ON & RPM-04 is under operation.
- Otherwise, daily data backup will NOT be proceeded.

2.4 SUPPORTED OS PLATFORM & LANGUAGE

RackPower Manager – RPM-04 supports the OS platforms & languages as below:

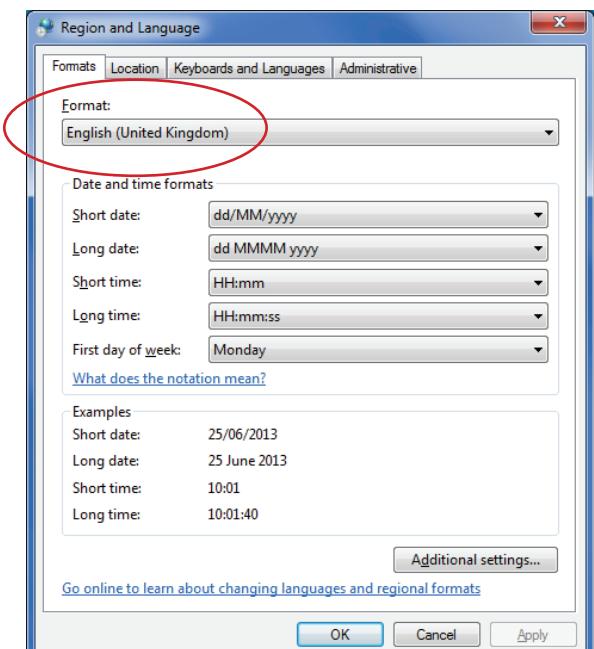

- MS Windows 10 Pro
- MS Windows 7 Professional with SP1
- MS Windows Server 2012 R2 Standard Edition
- MS Windows Server 2008 Standard Edition SP2
- MS Windows Server 2008 R2 Standard Edition SP1
- MS Windows Server 2003 R2 Standard Edition with SP2

Ensure the user logins in the management PC as a member of “Administrators” Group before RPM-04 Installation and execution.

User can select the following languages under Control Panel > Region and Language in English Edition OS:

- 1) Arabic (Saudi Arabia)
- 2) Chinese (Traditional, Hong Kong S.A.R.)
- 3) Dutch (Netherlands)
- 4) English (Australia)
- 5) English (United Kingdom)
- 6) English (United States)
- 7) French (France)
- 8) German (Germany)
- 9) German (Switzerland)
- 10) Italian (Italy)
- 11) Japanese (Japan)
- 12) Korean (Korea)
- 13) Norwegian (Norway)
- 14) Portuguese (Portugal)
- 15) Russian (Russia)
- 16) Spanish (Spain)
- 17) Turkish (Turkey)

2.5 SOFTWARE DOWNLOAD

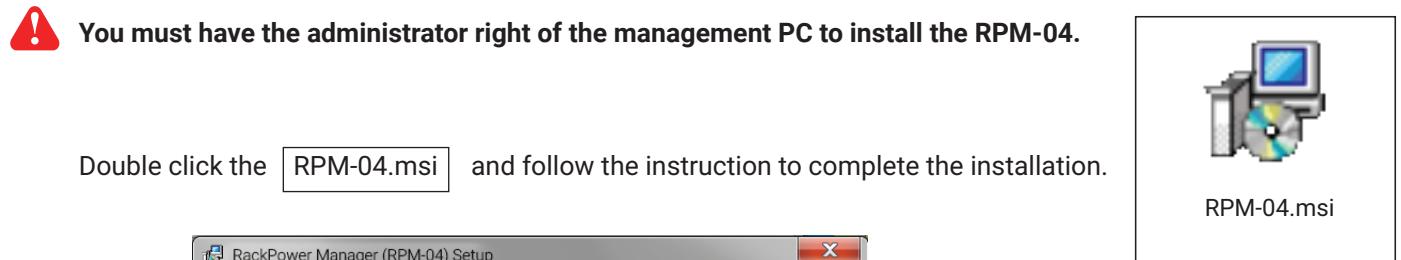

RackPower Manager, RPM-04, is a **PDU** management software to enhance the features and benefits of all Dual Feed single phase , single & 3 Phase PDUs by providing a centralized and remote management platform, and total reporting with detailed logs & event occurrences.

RPM-04 supports max. 5 concurrent login users and manage multi- IP Hardware groups max. 50, hence the concurrent login users can access & remote PDUs max. 800 (50 IP Hardwares x 16 level PDUs).

Software download

Please download the RackPower Manager - RPM-04 to the management PC

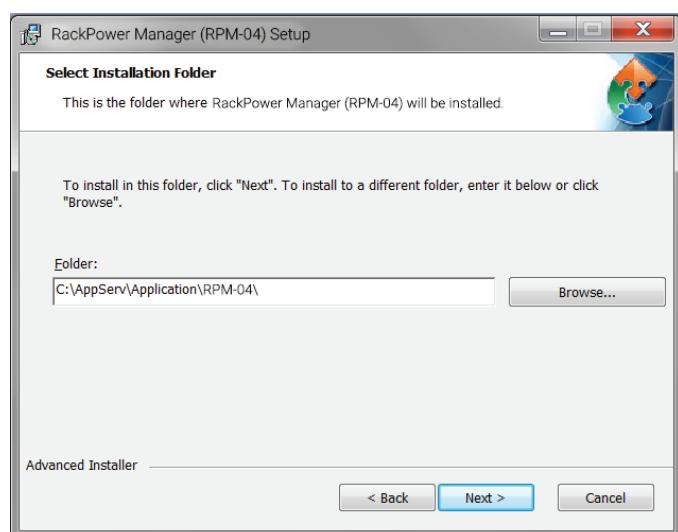

from the link <https://lp.schroff.nvent.com/en/rackpower-support>

Double click the **RPM-04.msi** and follow the instruction to complete the installation.

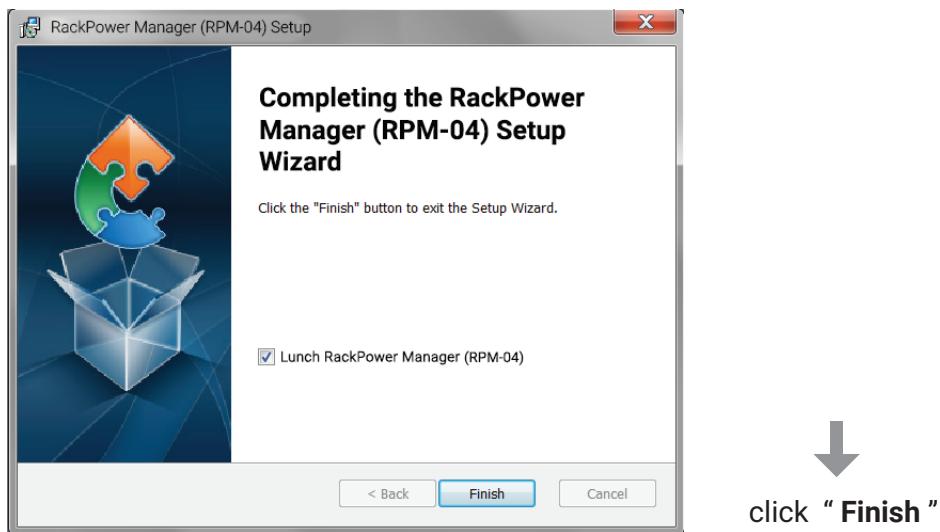

click “ **Next** ”

click “ **Install** ”

2.5 SOFTWARE DOWNLOAD

click “Finish”

< 2.6 > FIRST TIME START-UP SETTING

Step 1. Double Click the RackPower Manager - RPM-04

and follow the instruction to complete start-up setting.

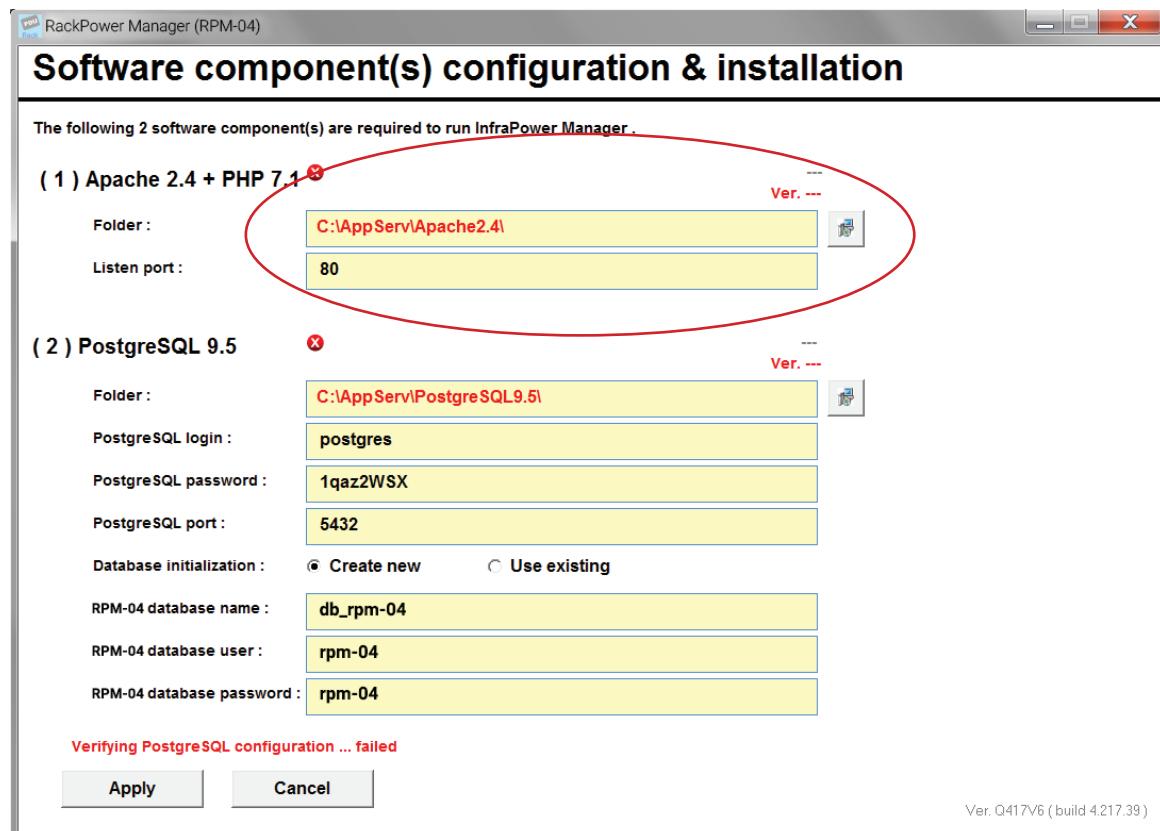

Step 2. Click “ Next ” in “ RackPower Manager start-up setting ” box

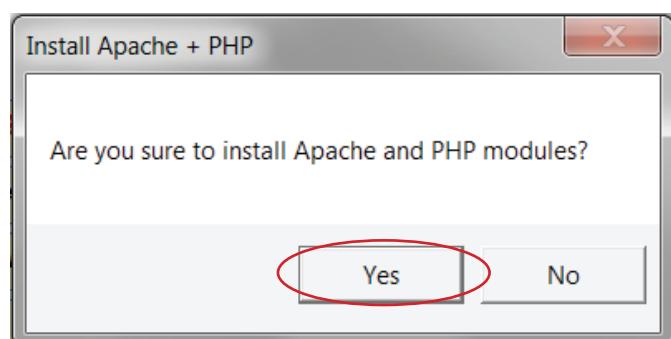

2.6 FIRST TIME START-UP SETTING

Step 3. Apache 2.4 + PHP 7.1 installation

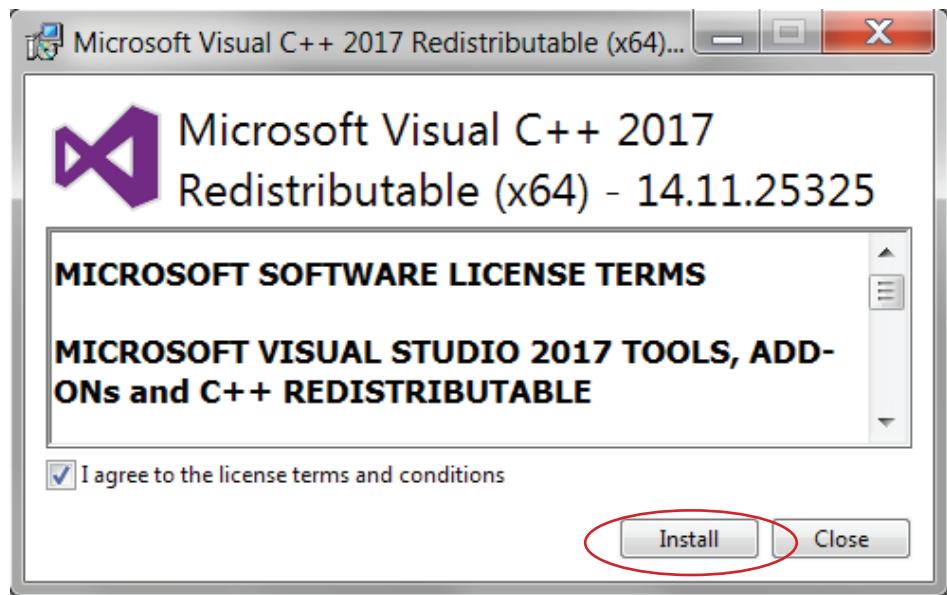

- Input the Apache 2.4 +PHP 7.1 installation path in “ **Folder** ” (Default: C:\AppServ\Apache2.4\)
- Input the port no. in “ **Listen port** ” (Default: 80)
- Click  install Apache 2.4 + PHP 7.1

Step 4. Click “ Yes ” to start the installation

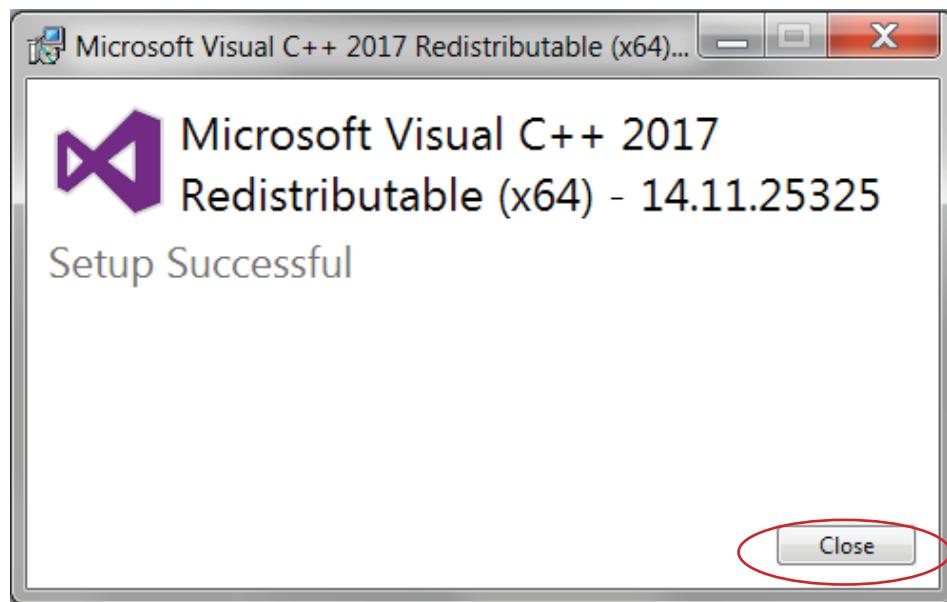

2.6 FIRST TIME START-UP SETTING

Step 5. Click “ Install ” to install the Microsoft Visual C++ 2017 Redistributable package.

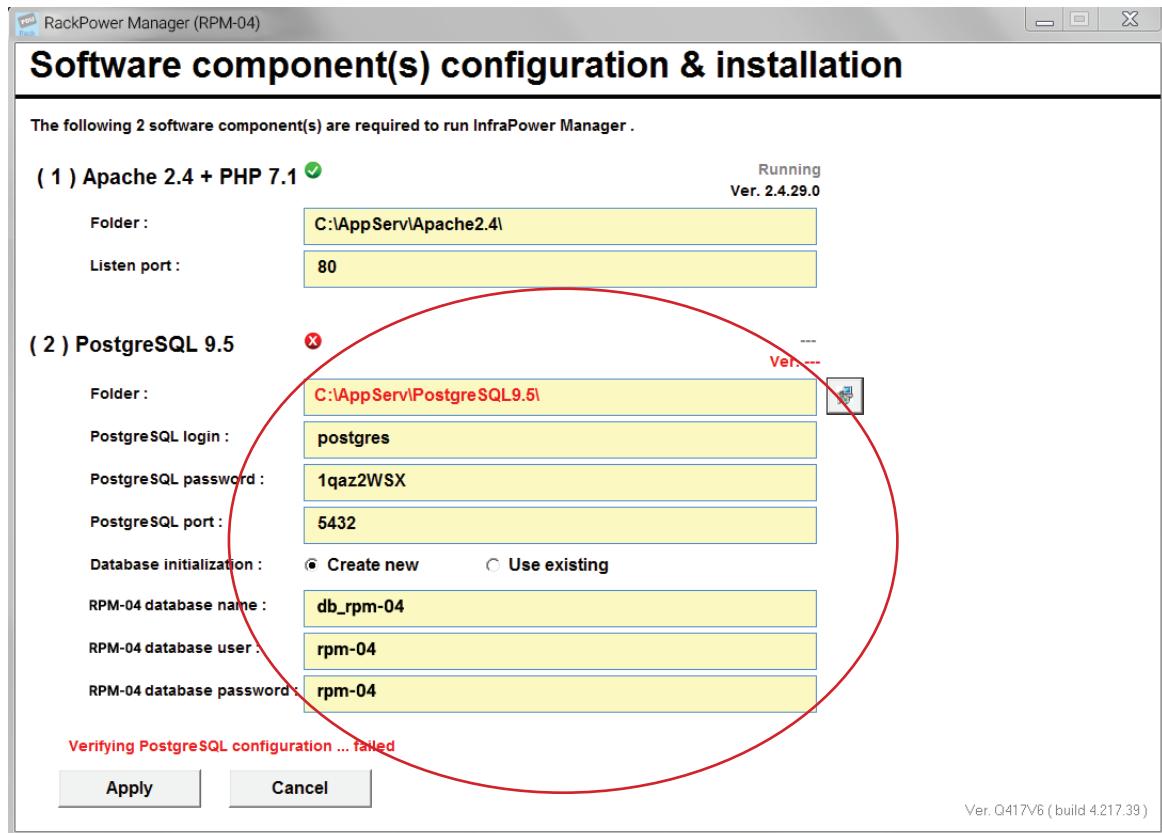

Step 6. Click “ Close ” to complete the installation.

2.6 FIRST TIME START-UP SETTING

Step 7. PostgreSQL 9.5 installation

- Input the PostgreSQL 9.5 Installation path in “ **Folder** ” (Default: **C:\AppServ\PostgreSQL9.5**)
- Input the PostgreSQL login name in “ **PostgreSQL login** ” (Default: **postgres**)
- Input the PostgreSQL password in “ **PostgreSQL password** ” (Default: **1qaz2WSX**)
- Input the PostgreSQL port in “ **PostgreSQL port** ” (Default: **5432**)
- Select “ **Create new** ” in “ **Database initialization** ” for first time installation
- Input RPM-04 database name in “ **RPM-04 database name** ” (Default: **RPM-04**)
- Input RPM-04 database user in “ **RPM-04 database user** ” (Default: **RPM-04**)
- Input RPM-04 database password in “ **RPM-04 database password** ” (Default: **RPM-04**)

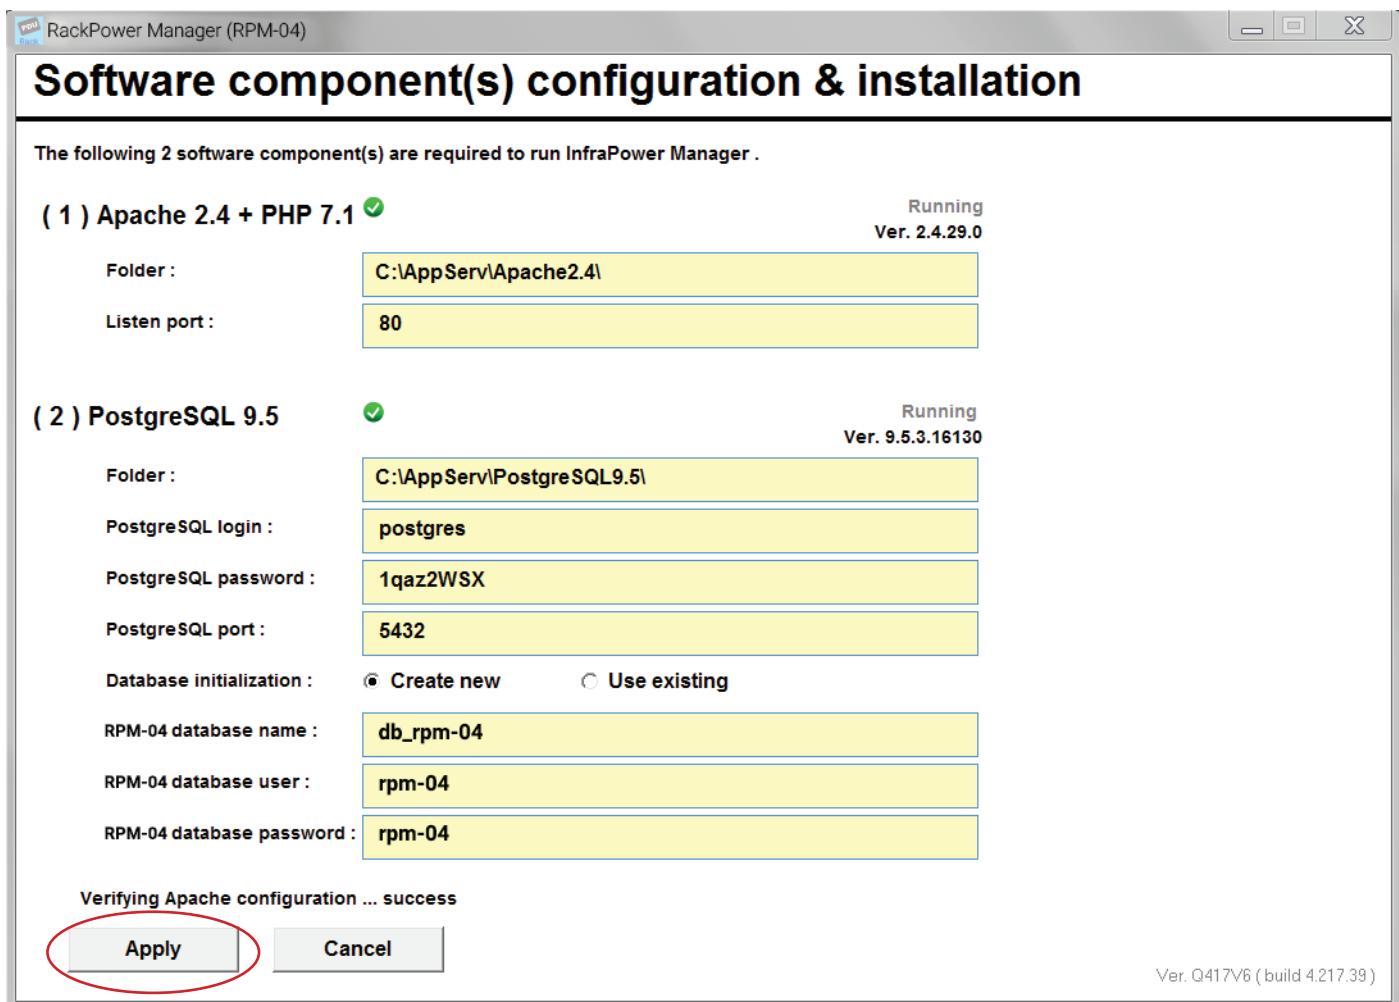

The password **MUST** contain at least three of the following four character groups:

- English uppercase characters (A through Z)
- English lowercase characters (a through z)
- Numerals (0 through 9)
- Non-alphabetic characters (such as !, \$, #, %)

- Click  to install PostgreSQL 9.5

2.6 FIRST TIME START-UP SETTING

Step 8. Click “**Apply**” to complete the first time start-up setting

• Complete

2.7 WEB SERVER PORT NO. CHANGE

Web server port no. change

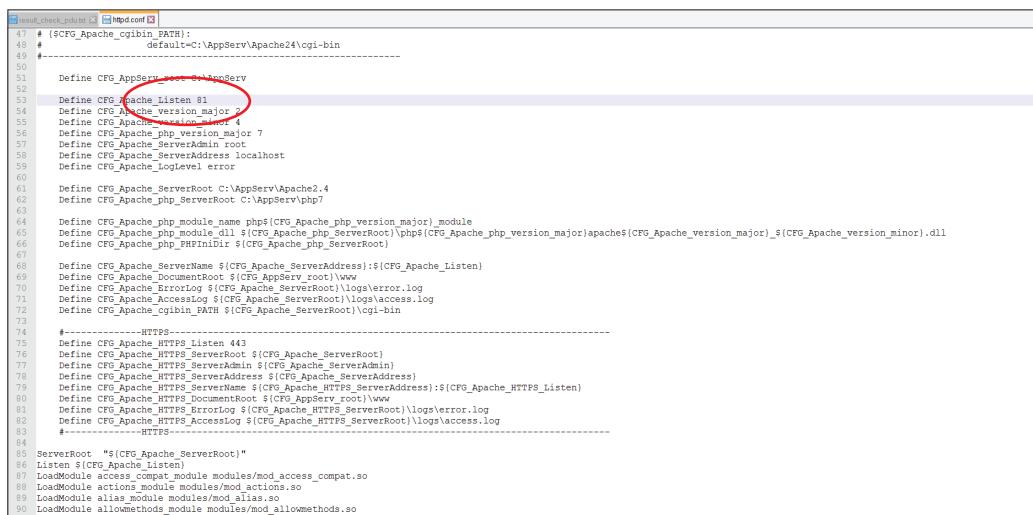

If users want to use another port no. instead of 80, please take the following steps after

RackPower Manager RPM-04 “First time start-up setting” is completed.

Step 1. Go to the path of web server being installed. (Default: **C:\AppServ\Apache2.4\conf**)

Step 2. Open “**httpd.conf**” & change “**Listen 80**” to “**Listen xx**” where xx means that the port no. will be selected by the user

Step 3. Save the change of “**httpd.conf**”

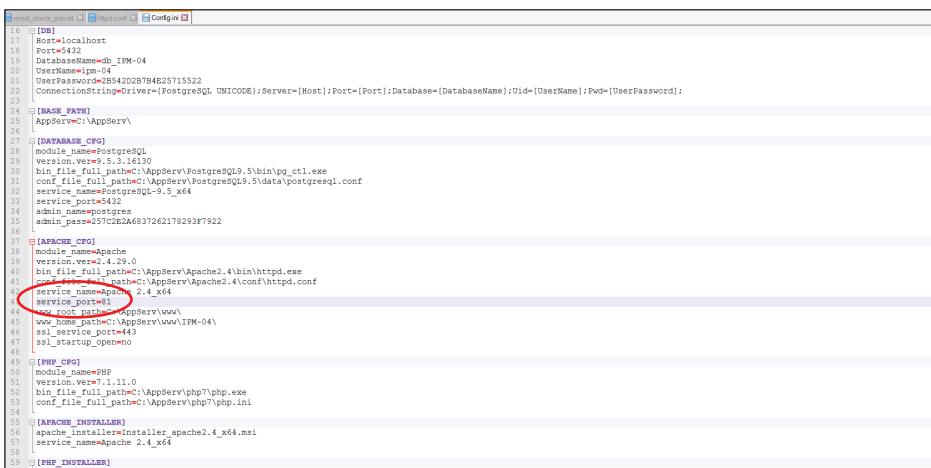

```
# (CFG_Apache_cgi-bin PATH:
#   default=C:\AppServ\Apache24\cgi-bin
#
# Define CFG_Apache_Script_Symlinkserv
# Define CFG_Apache_Listen 81
# Define CFG_Apache_Version_major 2
# Define CFG_Apache_Version_minor 4
# Define CFG_Apache_ErrorLogPath C:\AppServ\Apache24\logs\error.log 7
# Define CFG_Apache_ServerAdminRoot
# Define CFG_Apache_ServerAddress localhost
# Define CFG_Apache_LogLevel error
# Define CFG_Apache_ServerRoot C:\AppServ\Apache2.4
# Define CFG_Apache_Php_ServerRoot C:\AppServ\php7
#
# Define CFG_Apache_php_module_name phps$(CFG_Apache_php_version_major)_module
# Define CFG_Apache_php_module_dll $(CFG_Apache_php_ServerRoot)\php$(CFG_Apache_php_version_major)_$(CFG_Apache_version_minor).dll
# Define CFG_Apache_php_FastCGIDll $(CFG_Apache_php_ServerRoot)\php$(CFG_Apache_php_version_major)_$(CFG_Apache_version_minor).dll
#
# Define CFG_Apache_ServerName $(CFG_Apache_ServerAddress):$(CFG_Apache_Listen)
# Define CFG_Apache_DocumentRoot $(CFG_Apache_root)\www
# Define CFG_Apache_ErrorLog $(CFG_Apache_ServerRoot)\logs\error.log
# Define CFG_Apache_ServerRoot $(CFG_Apache_ServerRoot)\logs\access.log
# Define CFG_Apache_cgi-bin PATH $(CFG_Apache_ServerRoot)\cgi-bin
#
# -----
# Define CFG_Apache_HTTPS_Listen 443
# Define CFG_Apache_HTTPS_ServerRoot $(CFG_Apache_ServerRoot)
# Define CFG_Apache_HTTPS_ServerAdmin $(CFG_Apache_ServerAdmin)

# LoadModule alias_module modules/mod_alias.so
# LoadModule allowmethods_module modules/mod_allowmethods.so
```

Step 4. Open the config.ini of RPM-04 installation path.

(Default: **C:\AppServ\Application\RPM-04**)

Step 5. Change “**service_port=80**” to “**service_port=xx**” where xx must be the same as the one changed in httpd.conf

Step 6. Save the change of “**config.ini**”

```
[DB]
Host=localhost

[PHP_INSTALLER]
```

Step 7. Restart Apache services.

Go to Control Panel > Administrative Tools > Services > Apache2.4 & Click “**Restart**”

Part III. System Setup & Remote Access

3.1 SYSTEM SETUP

Users can follow below step 1 - 3 to access the management PC and RackPower Manager RPM-04

Step 1. Open Internet Explorer (I.E.), version 11.0

Step 2. Enter the URL of management PC into the address bar

 (If fail to access, please ask MIS to check if the port for web server is enable.

Default port: 80)

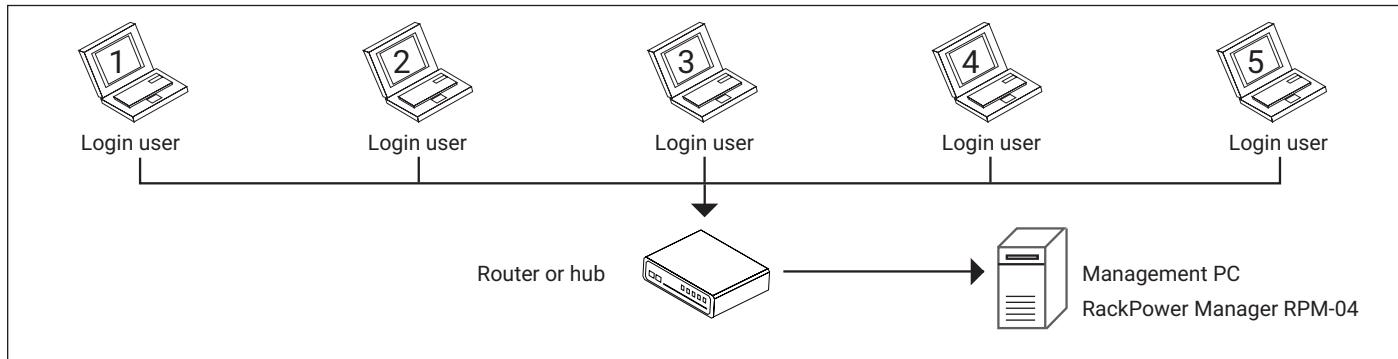

e.g. <http://192.168.0.1/RPM-04/>

Step 3. Enter “ User name ” . Default is “ admin ”

Enter “ Password ” . Default is “ 00000000 ”

System authentication

User name	<input type="text" value="admin"/>
Password	<input type="password" value="••••••••"/>
<input type="button" value="Login"/>	<input type="button" value="Cancel"/>

Only one administrator among 5 concurrent users

Only Administrator is authorised to access:

< User >, < Setup >, < Alarm >, < General >, < Backup > & < Global >

3.1 SYSTEM SETUP

In < User >, administrator can create 4 more operators (concurrent users).

Step 1. Tick “ Operator 1: ”

Step 2. Input “ User name ” & “ User login password ”

Step 3. Input user login password in “ Confirm password ” again

Step 4. Repeat Step 1 to 3 for other operators

Step 5. Click “ Apply ” to finish the user setup

User setup			
	Activate	User name	User login password
Administrator :	<input checked="" type="checkbox"/>	admin	*****

3.1 SYSTEM SETUP

In < Setup >, administrator can activate max. 50 IP Hardware groups & set the group command password

Step 1. "Activate" IP Hardware group 01

Step 2. Input "IP address" & "password" of the IP Hardware

Step 3. "Enable" Command password

Step 4. Input "New command password". Default is "00000000"

Step 5. Input new command password in "Confirm new password" again.

Step 6. Click "Apply" to finish the IP Hardware group setup

Step 7. Repeat step 1 to 6 for other IP Hardware groups

* Initially, please setup the IP Hardware one by one.

IP Hardware group	<input checked="" type="checkbox"/> Activate	<input type="checkbox"/> Deactivate	<ul style="list-style-type: none">- IP100H supports 50 groups that managing IP configuration and PDU communication.- each IP device owns a total of max 12 single and max 4GMDI.	
IP Hardware setting		<ul style="list-style-type: none">- If the administrator wants to change IP dingle address and password, two steps are required.- Firstly, enter the IP Setup window to make the change (ref. In User Manual < IP100H Configuration >).- Secondly, return to this page to make the same change on IP address and password.		
IP Hardware group		<ul style="list-style-type: none">- Administrator needs to set command password for IP simple groups one by one.- Command password required for any PDU configuration and control.- Administrator can set different command password to different IP dingle groups or all IP dingle groups share the same password.		
Command password:		<input type="checkbox"/> Enable	<input checked="" type="checkbox"/> Disable	
New command password:	<input type="password"/>			
Confirm new password:	<input type="password"/>			
Apply		Cancel		

3.1 SYSTEM SETUP

In < **Alarm** >, administrator can configure the alarm email server & max. 5 email recipients to receive alarm notifications from the software

Default is “**Disable**”.

Step 1. “ **Enable** ” alarm email

Step 2. Input “ **SMTP server** ” and “ **SMTP port** ”

Step 3. Input “ **User email** ”

Step 4. “ **Enable** ” or “ **Disable** ” the “ **SMTP authentication** ”

Step 5. Input “ **User name** ” and “ **Password** ”

Step 6. Select the “ **SMTP secure** ” (**None / SSL / TLS**)

Step 7. Input the “ **Alarm interval** ”

Step 8. Input the alarm recipient email account in “ **Alarm mail recipient 01** ”

Step 9. Repeat step 8 for other alarm recipients

Step 10. Click “ **Apply** ” to finish the alarm email server setting

Alarm email server setting	
Alarm email :	<input checked="" type="checkbox"/> Enable <input type="checkbox"/> Disable

3.1 SYSTEM SETUP

In < General >, administrator can change the “ Refresh rate ” , “ Scan rate ” & “ Temperature unit ” across all IP Hardware groups

Auto data refresh

Refresh rate : (Min. 10, Max. 60 seconds)

- Auto data refresh rate on the page of PDU STATUS, PDU DETAILS, OUTLET SCHEDULE OVERVIEW and TH STATUS.

IP Hardware groups auto scan

Scan rate : (Min. 5, Max. 60 seconds)

- Auto scan rate on the page of PDU STATUS, OUTLET SCHEDULE OVERVIEW and TH STATUS.

Temperature unit

Unit : °C °F

Buttons

In < Backup >

Default is “ Enable ”

Default Backup Path: “ C:\AppServ\Application\RPM-04\ ”

Data backup setting

Daily backup : Enable Disable

Backup to :

- Daily backup proceeded at 00:00 for last 24 hours data.
- The backup data for PDU, Inline Meter, TH SENSOR LOG, EVENT saved in CSV file format.
- Folder will be automatically created under the path you entered.

Buttons

3.1 SYSTEM SETUP

In < Global > , you can configure the settings of all the connected PDU's.

- Edit the PDU bank / circuit level alarm amp. , rising alert amp. & low alert amp. threshold
- Edit the PDU outlet level alarm amp. , rising alert amp. & low alert amp. threshold
(Outlet Measurement PDU only)
- Activate / Deactivate the TH1 & TH2 sensor. When activated, you can edit the Temp. / Humid alarm & rising alert threshold.

 Before you do the PDU global setting , please search the connected PDU's of each IP Hardware group first.

	(2)	Change alarm email server setting								
	(3)	Add / Delete alarm mail recipient								

3.2 REMOTE ACCESS

After the completion of < **System Setup** > administrator and 4 concurrent users can access the management PC remotely. All of them can follow the steps below to access management PC &

RPM-04

Step 1. Add the port of web server in the firewall settings of the management PC.

- Open “ **Control Panel** ”
- Select “ **Windows Firewall** ”
- Select “ **Advanced settings** ”
- Right Click “ **Inbound Rules** ” & select “ **New Rule...** ”
- Select “ **Port** ” & Click “ **Next>** ”
- Select “ **TCP** ” then “ **All local ports** ” & Click “ **Next>** ”
- Select “ **Allow the connection** ” & Click “ **Next>** ”
- Tick all three options & Click “ **Next>** ”
- Input the “ **Name** ” & “ **Description** ” of the port & Click “ **Finish** ”

Step 2. Open the web browser of remote client PC

Step 3. Input the URL of **RackPower Manager RPM-04** in the address bar

e.g. <http://192.168.0.1/RPM-04/>

If the port no. of web server is not 80, please enter the appropriate port no. follow the IP address e.g. <http://192.168.0.1:81/RPM-04/>

Step 4. System authentication page pops up automatically.

Input “ **User name** ”, “ **Password** ” & Click “ **Login** ”

System authentication

User name	<input type="text" value="admin"/>
Password	<input type="password" value="*****"/>
<input type="button" value="Login"/> <input type="button" value="Cancel"/>	

Part IV. Software Usage & Operation

4.1 STATUS

< Status > provides

- **Search** function to search new installed PDUs in each IP Hardware group.

During searching process, the PDU system timer will be synchronized from the management PC

- **Scan** function to monitor the PDUs' status of each IP Hardware group **ONE by ONE**

Part VI. Report

< Report > provides monthly report for **PDU log** , **Inline meter log** , **outlet log** ,
TH sensor log , **Daily kWh log** & **Event log** which can be exported in CSV format.

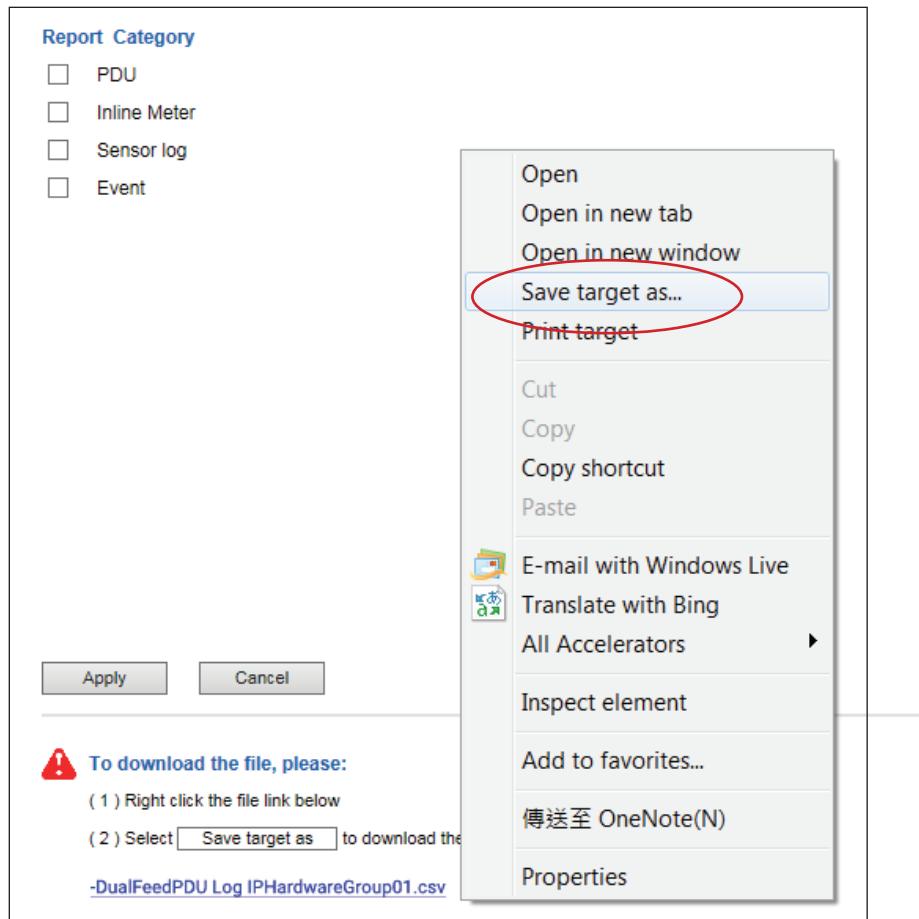

Please follow the steps below to export the log category you want:

Step 1. Select “ Report Category ” , “ Period ” & “ Target ”

Report Category	<input checked="" type="checkbox"/> PDU	<input type="checkbox"/> Single Feed	<input checked="" type="checkbox"/> Single phase PDU log	Period (Year / Month)	Target
	<input type="checkbox"/> Inline Meter	<input checked="" type="checkbox"/> Dual Feed	<input type="checkbox"/> Single phase PDU daily kWh log	From <input type="button" value="2017"/> / <input type="button" value="12"/>	IP Hardware group <input type="button" value="01"/>
	<input type="checkbox"/> Sensor log		<input type="checkbox"/> Single phase outlet log	To <input type="button" value="2017"/> / <input type="button" value="12"/>	PDU level :
	<input type="checkbox"/> Event		<input type="checkbox"/> Single phase outlet daily kWh log		<input checked="" type="checkbox"/> 01 <input checked="" type="checkbox"/> 05 <input checked="" type="checkbox"/> 09 <input checked="" type="checkbox"/> 13 <input checked="" type="checkbox"/> all
					<input checked="" type="checkbox"/> 02 <input checked="" type="checkbox"/> 06 <input checked="" type="checkbox"/> 10 <input checked="" type="checkbox"/> 14
					<input checked="" type="checkbox"/> 03 <input checked="" type="checkbox"/> 07 <input checked="" type="checkbox"/> 11 <input checked="" type="checkbox"/> 15
					<input checked="" type="checkbox"/> 04 <input checked="" type="checkbox"/> 08 <input checked="" type="checkbox"/> 12 <input checked="" type="checkbox"/> 16

Step 2. Click “**Apply**” & Click “**OK**” from the pop up window

Step 3. Right Click the file name below & Select “Save target as” to download the log file

Step 4. Click “Close” to complete or “Open” to view the content of log file

..... **Complete**

Part VII. SNMP & IP Hardware

7.1 SNMP SETUP

The IP Hardware can manage the connected dual feed single phase, single & three phase intelligent PDUs in a single daisy chain up to 16 levels via SNMP v1/v2 or v3 (Simple Network Management Protocol)

Only IP Hardware model: NPDV or NPDH can support SNMP

(I). Accessing MIB Files

Step 1. Click the following link to go to the management software download page:

<https://lp.schroff.nvent.com/en/rackpower-support>

Step 2. Select the appropriate MIB file of the PDU series

(II). Enabling SNMP Support

i. The following steps summarize how to enable the IP Hardware for SNMP v1 / v2 support.

Step 1. Connect the IP Hardware to a computer. (Please refer to < 2.2 > IP Hardware Configuration)

Step 2. Open the Internet Explorer (I.E.) version 11.0

Step 3. Enter the configured IP Hardware address into the I.E. address bar.

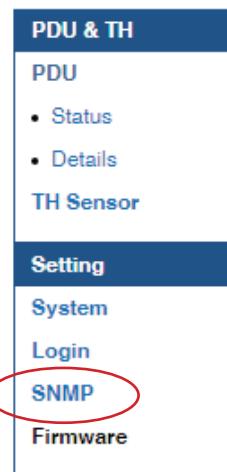

Default IP address is “ **192.168.0.1** ”

Step 4. Enter “ **Login name** ” & “ **Password** ” . Default login name & password are “ **00000000** ”

Login name	<input type="text"/>
Password	<input type="password"/>
<input type="button" value="Login"/> <input type="button" value="Cancel"/>	

7.1 SNMP SETUP

Step 5. Select the **SNMP** from the left navigation pane

Step 6. The **SNMP** Settings window appears as below:

A screenshot of the 'SNMP' settings window. It has a title bar 'SNMP'. Under 'SNMP agent', 'Disable' is selected. 'SNMP version' is set to 'v1/v2'. 'SNMP port' is set to '161'. The 'SNMP configuration' section contains 'Read community: public' and 'Write community: private'. There are three sections for 'Station 1', 'Station 2', and 'Station 3', each with 'Deactivate' and 'Activate' radio buttons. For Station 1, 'Trap Station IP' is '192.168.0.254', 'Trap port' is '162', and 'Trap community' is 'private'. For Station 2, the values are identical. For Station 3, the values are identical. At the bottom are 'Apply' and 'Cancel' buttons.

Step 7. Click “**Enable**” in “**SNMP agent**” to start the SNMP agent service

Step 8. Select “**v1/v2**” in “**SNMP version**”

Step 9. Input “**SNMP port**”. Default is 161.

Step 10. Input “**Read Community**”. Default is “public”

Step 11. Input “**Write Community**”. Default is “private”

Step 12. Click “**Activate**” in Station 1 to enable the trap service

Step 13. Input “**Trap Station IP**”, “**Trap Port**” & “**Trap Community**” of Station 1

Step 14. Repeat Step 12 & 13 for Station 2 & 3.

Step 15. Click “**Apply**” to finish the SNMP v1 / v2 settings

7.1 SNMP SETUP

ii. The following steps summarize how to enable the IP Hardware for SNMP v3 support.

Step 1. Connect the IP Hardware to a computer. (Please refer to < 2.2 > IP Hardware Configuration)

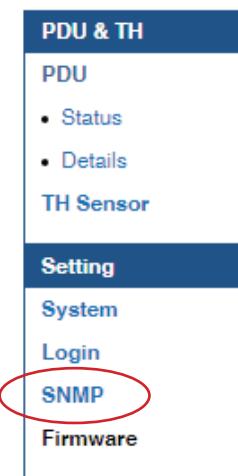

Step 2. Open Internet Explorer (I.E.) version 11.0

Step 3. Enter the configured IP Hardware address into the I.E. address bar

Default IP address is “ **192.168.0.1** ”

Step 4. Enter “ **Login name** ” & “ **Password** ” . Default login name & password are “ **00000000** ”

Step 5. Select SNMP from the left navigation pane

Step 6. The **SNMP** Settings window appears as below:

A screenshot of the 'SNMP' settings window. At the top, there are fields for 'SNMP agent' (radio buttons for 'Enable' and 'Disable', with 'Disable' selected), 'SNMP version' (dropdown menu showing 'v1/v2' with a checkmark), and 'SNMP port' (text input field containing '161').

The main area is titled 'SNMP configuration' and contains two sections:

- Station 1:** Trap Station IP: 192.168.0.254, Trap port: 162, Trap community: private. Status: Deactivate (radio button selected).
- Station 2:** Trap Station IP: 192.168.0.254, Trap port: 162, Trap community: private. Status: Deactivate (radio button selected).
- Station 3:** Trap Station IP: 192.168.0.254, Trap port: 162, Trap community: private. Status: Deactivate (radio button selected).

At the bottom of the window are two buttons: 'Apply' and 'Cancel'.

7.1 SNMP SETUP

Step 7. Click “ **Enable** ” in “ **SNMP agent** ” to start the SNMP agent service

Step 8. Select “ **v3** ” in “ **SNMP version** ” & the SNMP v3 settings window appears as below:

The screenshot shows the SNMP configuration interface with the following details:

SNMP configuration		
User 1	User 2	User 3
<input checked="" type="radio"/> Deactivate <input type="radio"/> Activate	<input checked="" type="radio"/> Deactivate <input type="radio"/> Activate	<input checked="" type="radio"/> Deactivate <input type="radio"/> Activate
User role : <input type="button" value="read only"/>	User role : <input type="button" value="read only"/>	User role : <input type="button" value="read only"/>
USM user : usm_user1	USM user : usm_user2	USM user : usm_user3
Auth algorithm : None	Auth algorithm : MD5	Auth algorithm : None
Auth password : <input type="password" value="*****"/>	Auth password : <input type="password" value="*****"/>	Auth password : <input type="password" value="*****"/>
Privacy algorithm : None	Privacy algorithm : None	Privacy algorithm : None
Privacy password : <input type="password" value="*****"/>	Privacy password : <input type="password" value="*****"/>	Privacy password : <input type="password" value="*****"/>
SNMP trap : Disabled	SNMP trap : Disabled	SNMP trap : Disabled
Trap Station IP : 192.168.1.113	Trap Station IP : 192.168.1.39	Trap Station IP : 192.168.0.254
Trap port : 162	Trap port : 162	Trap port : 162

Buttons at the bottom: **Apply** and **Cancel**.

Step 9. Input “ **SNMP port** ”. Default is 161.

Step 10. Click “ **Activate** ” in User 1.

Step 11. Select “ **Read Only** ” or “ **Read & Write** ” in User role:

Step 12. Input the name of “ **USM user** ” . Default is usm_user1

Step 13. Select “ **None / MD5 / SHA** ” in “ **Auth algorithm** ”.

If you select “ **Read & Write** ” in “ **User role** ” ,
you MUST select “ **MD5 / SHA** ” in “ **Auth algorithm** ”

Step 14. Input the “ **Auth password** ” Default is “ 00000000 ”

Step 15. Select “ **None / DES / AES** ” in “ **Privacy algorithm** ”.

If the Auth algorithm is “ **NONE** ” , NO privacy algorithm can be selected.

Step 16. Input the “ **Privacy password** ”

Step 17. If you want to receive trap message, select “ **Enable** ” in **SNMP trap**

Step 18. Input the “ **Trap Station IP** ” & “ **Trap port** ”

Step 19. Repeat step 10 to 18 for User 2 & 3.

Step 20. Click “ **Apply** ” to finish the SNMP v3 settings.

7.2 IP HARDWARE FIRMWARE UPGRADE

< Firmware Upgrade >

For function enhancement of IP Hardware WEB UI or fail to search the PDU, please take the following steps to remotely upgrade the IP Hardware firmware:

Step 1. Click the following link to go to the management software download page:

<https://lp.schroff.nvent.com/en/rackpower-support>

Step 2. Select the appropriate IP Hardware firmware file of the PDU series

Step 3. Connect the IP Hardware to the computer. (Please refer to < 2.2 > IP Hardware Configuration)

Step 4. Open the Internet Explorer (I.E.) version 11.0

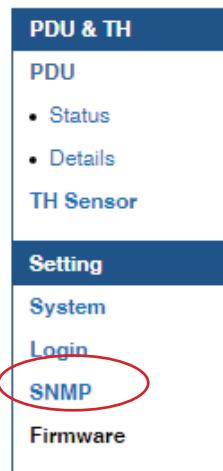

Step 5. Enter the configured IP Hardware address into the I.E. address bar.

Default IP address is “ **192.168.0.1** ”

Step 6. Enter “ **Login name** ” & “ **Password** ”. Default login name & password are “ **00000000** ”

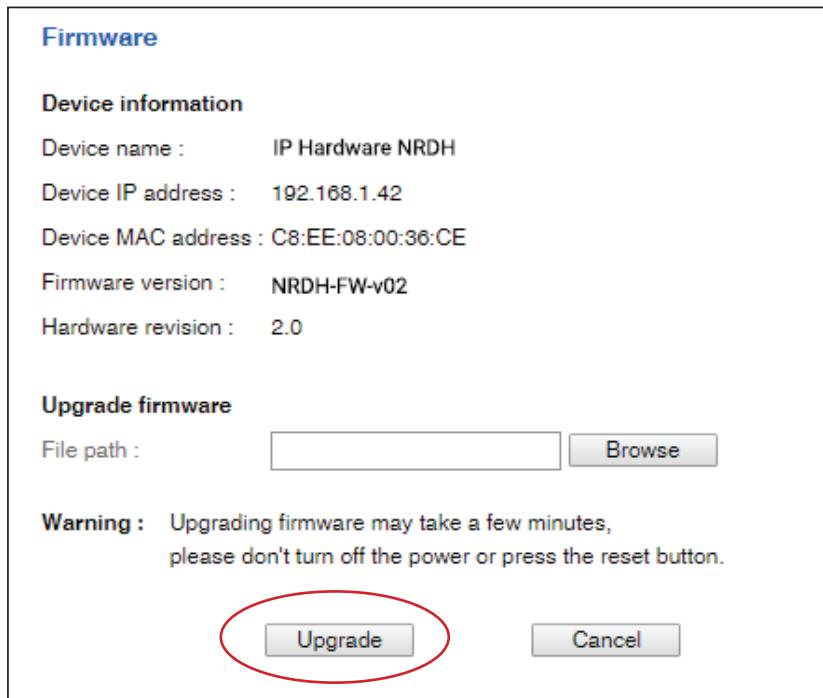

A screenshot of a Windows-style login dialog box. It contains two text input fields: one for "Login name" and one for "Password". Below the fields are two buttons: "Login" on the left and "Cancel" on the right.

Step 7. Select the Firmware from the left navigation pane

7.2 IP HARDWARE FIRMWARE UPGRADE

Step 8. The firmware upgrade window appears as below:

Step 9. Click “**Browse**” and select the firmware file (xxx.img) from the specific path in the pop up window and Click “**Open**”

Step 10. Click “**Upgrade**” to start the upgrade process. It takes a few minutes to complete.

Step 11. Once complete, UI will return to the login page.

7.3 DHCP SETTING

Step 1. Connect the IP Hardware to the computer (Please refer to < 2.2 > IP Hardware Configuration)

Step 2. Open the Internet Explorer (I.E.) version 11.0

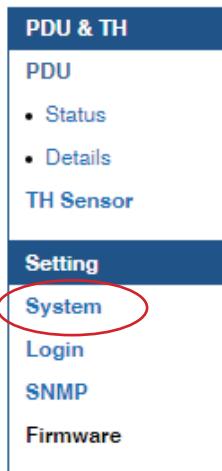

Step 3. Enter the default IP address of the IP Hardware into the I.E. address bar.

Default IP address is “ **192.168.0.1** ”

Step 4. Enter the “ **Login name** ” & “ **Password** ” . Default login name & password are “ **00000000** ”

A screenshot of a standard Windows-style login dialog box. It contains two text input fields: one for "Login name" and one for "Password". Below the fields are two buttons: "Login" on the left and "Cancel" on the right.

Step 5. Select “ **System** ” from the left navigation pane

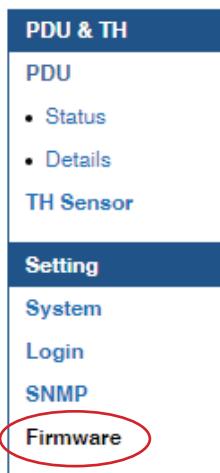

Step 6. Select “ **ON** ” from “ **DHCP** ” & click “ **Apply** ” to save the settings

A screenshot of the "IP Hardware" configuration page. Under "IP settings", the "DHCP" dropdown is set to "ON" (highlighted with a red circle). Other settings include "Address: 192.168.1.42", "Subnet mask: 255.255.255.0", and "Gateway: 192.168.1.1". A note at the bottom states: "Remarks : If you change the operation mode, the IP Hardware will reboot to make the change effective." At the bottom are "Apply" and "Cancel" buttons.

7.3 DHCP SETTING

Step 7. Select “Firmware” from the left navigation pane

Step 8. Record the “Device MAC address”

Firmware

Device information

Device name : IP Hardware NRDH

Device IP address : 192.168.1.42

Device MAC address : C8:EE:08:00:36:CE

Firmware version : NRDH-FW-v02

Hardware revision : 2.0

Upgrade firmware

File path :

Warning : Upgrading firmware may take a few minutes,
please don't turn off the power or press the reset button.

Step 9. Assign an IP address to the IP Hardware from your DHCP server.

• Complete

Part VIII. FAQ

8.1 MANAGEMENT SOFTWARE

1. Is RPM-04 management software free of charge?

Yes.

2. What is RackPower Manager?

The RackPower Manager RPM-04 is a Windows based system to consolidate management of max. **800 PDUs** via **50 IP Hardwares**, using a simple web interface which monitors and controls dual feed single phase , single & 3 Phase RP series PDUs.

- SNMP Capability v2 / v3 via IP Hardware
- Outlet switch On/Off and scheduling
- Outlet level kWh & amp measurement
- Temp-Humid monitoring
- Graphic user interface
- PDU & outlet reporting (kWh / Amp / Event / Temp & Humid)

3. Which OS platform does RPM-04 support?

- MS Windows 10 Pro
- MS Windows 7 Professional with SP1
- MS Windows Server 2012 R2 Standard Edition
- MS Windows Server 2008 Standard Edition SP2
- MS Windows Server 2008 R2 Standard Edition SP1
- MS Windows Server 2003 R2 Standard Edition with SP2

Ensure the user logins as a member of “Administrators” Group before RPM-04 Installation and execution.

4. What are the default ports used in the RPM-04?

- UTP port: 8890 for searching IP Hardware
- TCP port: 4000 for IP Hardware communication
- TCP port: 80 for HTTP
- TCP port: 25 for email alarm service (can be changed by user)

5. Why can't I access the login page?

- If the web service is started & the port of web server is open in firewall setting

6. Why can't I login remotely?

- If the login name & password is correct

7. Which database does the RPM-04 support?

PostgreSQL

8. What is the PostgreSQL default password for RPM-04?

1qaz2WSX

9. How can I receive alarm email and get a full log report?

Ensure that RPM-04 is executed and the alarm server is configured properly and being enabled.

10. What is the default user name & login password of RPM-04?

8.1 MANAGEMENT SOFTWARE

Default user name " admin " / Default login password " 00000000 "

11. What is the command password of RPM-04?

- Each IP Hardware group has its command password (Default " 00000000 ") .
- For security, it will be requested for any PDU configuration and control.
- Only administrator can set command password.
- The passwords are disabled or enabled, same or different subject to the administrator's management.

12. Is it possible to increase PDU from 800 & IP Hardware group from 50?

Yes, but custom management software & service charges required.

13. Is it possible to increase the concurrent user from 5?

Yes, but custom management software & service charges are required.

14. Can I manage RP series PDUs from different workstations?

Yes, max. 5 concurrent login users from different workstations.

15. Why UI shows PDU / PDUs disconnection?

- The PDU is power OFF or
- Duplicate the PDU level no. or
- Cable loose / defective

- The IP Hardware fails
Refer to < 8.2 > IP Hardware

- The RP Meter fails
Refer to < 8.3 > RP Meter

- The power module fails
Refer to < 8.4 > Power Module

16. Why UI shows Temp. / Temp. + Humid sensor disconnection?

- Temp. / Temp. + humid sensor is NOT connected
- Temp. / Temp. + humid sensor in BAD contact
- Temp. / Temp. + humid sensor is defective

8.2 IP HARDWARE

1. What is the IP Hardware?

The IP Hardware, with patented hot-plug & field replaceable design and SNMP function, provides a simple and economical way to consolidate management of max. 16 pcs of Dual Feed single phase , single & 3 Phase PDUs via a single network IP address to save IP address cost.

2. Does IP Hardware have a built-in UI?

Yes, a built-in UI provides a general remote monitoring & control for cascaded PDUs. However, this built-in UI can only manage up to 16 PDUs in a daisy chain, without any reporting, event, & log. The free RPM-04 PDU management software will allow you to monitor, control, and log if that is necessary.

3. Can I use the built-in Hardware UI and RPM-04 management software simultaneously?

No, only either one.

4. Is the IP Hardware essential to RPM-04 management software?

Yes, the software can't run without IP Hardware

5. Is the IP Hardware essential to SNMP function?

Yes, absolutely.

6. Does the IP Hardware support SNMP v2 and v3?

Yes.

7. What is default setting of IP Hardware?

The default IP setting is as below: IP address: 192.168.0.1
Subnet mask: 255.255.255.0
Gateway: 192.168.0.254

8. What is the IP setup utilities?

This is a windows application used to assign the IP address of IP Hardware.
Please find the link below: <https://lp.schroff.nvent.com/en/rackpower-support>

9. What are the default ports used in IP setup utilities?

- UTP port: 8880, 8881, 8882, 8883, 8884, 8888, 8889, 8890 & 8891

10. Does the IP Hardware support DHCP (Dynamic Host Configuration Protocol)?

Yes.

8.2 IP HARDWARE

11. Will the reset of IP Hardware affect the power to the outlets?

No, the IP Hardware operates on a separate circuit, so the power to the outlets will remain unchanged.

12. What are the symptoms if the IP Hardware fails?

- UI shows IP Hardware disconnection and users fail to access the whole cascaded PDUs
- Green LED off of IP Hardware

13. Why does the IP Hardware fail to work?

- The IP Hardware itself fails or
- The 1st level RP Meter fails or
- The 1st level Power Module fails or
- Cable loose or defective between IP Hardware and the network device

14. How can I replace a failed IP Hardware?

Download the guide below to replace the IP Hardware: <https://lp.schroff.nvent.com/en/rackpower-support>

15. Does the IP Hardware have firmware built-in?

Yes

16. How can I get the updated IP Hardware firmware?

Please find the link below: <https://lp.schroff.nvent.com/en/rackpower-support>

17. Can I remotely update the IP Hardware firmware?

Yes.

Download the guide below to update the firmware accordingly: <https://lp.schroff.nvent.com/en/rackpower-support>

8.3 RP METER

1. What are features of the RP Meter?

- Support Dual Feed single phase , single & 3 Phase PDU and they can be inter-cascaded in a single daisy chain
- Support switched PDU and outlet amp + kWh measurement
- Simply connect 1 x IP Hardware to access up to 16 PDUs to save IP network address
- SNMP Capability v2 / v3 via IP Hardware
- Sensor port x 2
- 2.8" color LCD featured w/ touchscreen
- Built-in buzzer will sound when circuit or bank Amp over alarm setting
- Field replaceable design allows meter replacement without PDU power interruption

2. What is the default PDU level?

Level 16

3. What is the default outlet status of Switched PDU?

ON

4. If one of the cascaded PDU RP Meter fails, will it affect the data transmission among PDUs in the same daisy chain?

No , the meter design prevents this from happening.

5. If one of the cascaded RP series PDU (meter) loses power, will it affect the data transmission among PDUs in the same daisy chain?

Yes, if the 1st level PDU loses power.

No , if NOT the 1st level PDU loses power.

6. What is the maximum cabling distance between two cascaded RP series PDUs?

Up to 20 meter (66 feet) via CAT. 5 / 6 cable.

7. What are the symptoms if the RP Meter fails?

- If the RP Meter PDU is one of that among the 2nd to last level, UI shows PDU disconnection and users fail to access this PDU
- If the RP Meter PDU is the 1st level, UI shows IP Hardware disconnection and users fail to access the whole cascaded PDUs
- RP Meter no display

8. Why the RP Meter fail to work?

- The RP Meter itself fails or
- The Power Module fails and can't supply power to RP Meter so the RP Meter fails to work or
- The Power Module IC defective and causes RP Meter has no data return or
- The LAN cable loose or defective

9. How can I replace a failed RP Meter?

Download the guide below to replace the RP Meter: <https://lp.schroff.nvent.com/en/rackpower-support>

8.3 RP METER

10. How accurate is the energy measurement on RP Meter?

The RP Meter have an accuracy of +/- 1% of reading across the entire power and outlets energy measurement compliant with IEC 62053/ANSI C12.20 Standards

- Ampere - squelched to 0A under 0.3A
- Accuracy is not defined below 0.3A.

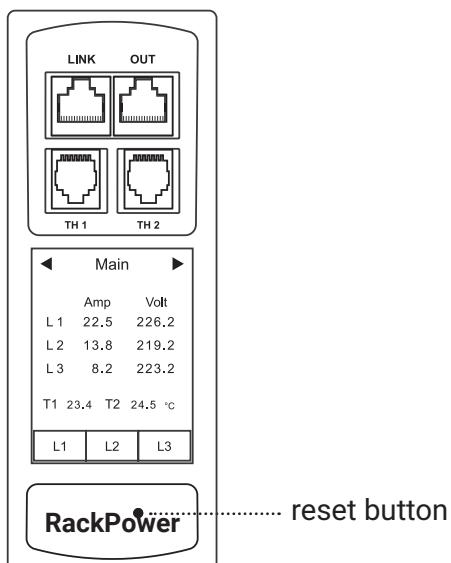

Functional Specifications - Metering	
Input Metering Range	0.3 to Rated Input Current
Outlet Metering Range	0.3 to 16.0A
Ampere Accuracy (A)	+/- 1%
Voltage Accuracy (V)	+/- 1%
Power Accuracy (kW)	+/- 1%
Energy Accuracy (kWh)	+/- (1%)*hours

11. Does the RP Meter have firmware built-in?

Yes

12. What can I do if the RP Meter turns white?

- Use a pin to press the reset button
- If the symptom still persists, call your dealer for support

8.4 POWER MODULE

1. What is feature of the Power Module?

- Convert AC to DC for RP Meter, IP Hardware & outlet control module
- Field replaceable design allows quick replacement

2. How affect the RP Meter if the Power Module fails?

It will cause the meter fails to work as below:

- If the RP Meter PDU is one of level among the 2nd to the last, UI shows PDU disconnection and users fail to access this PDU
- If the RP Meter PDU is the 1st level, UI shows IP Hardware disconnection and users fail to access the whole cascaded PDUs
- RP Meter no display and / or no data return

3. How is the switched & measurement RP2000 / RP3000 / RP1500 PDU affected if the Power Module fails?

- Lose outlet On/Off control and outlet amp & kWh measurement
- But outlet can still supply power to device

4. Why the Power Module fails to work?

- The power module itself fails

5. How can I replace a failed Power Module?

For safety, please follow the Power Module replacement guide.

Download the guide below to replace the Power Module: <https://lp.schroff.nvent.com/en/rackpower-support>

8.5 OUTLET CONTROL MODULE

1. How many types of Outlet Control Module?

The outlet control module is a built-in PCB and NOT a hot-swapped & field replaceable design.

- Switched & measurement module for RP3000 switched & outlet level measurement PDU
- Outlet measurement module for RP1500 outlet level measurement PDU
- Switched module for RP2000 switched PDU

2. How is the switched & measurement RP2000 / RP3000 / RP1500 PDU affected if the Outlet Module fails?

- Lose outlet On/Off control and outlet level measurement
- But outlet can still supply power to device

3. Why the outlet control module fails to work?

- The outlet control module itself fails

4. How can I replace a failed Outlet Control Module?

No, not like RP Meter & Power Module, Outlet Control Module is NOT hot-swapped & field replaceable design. You have to replace the whole PDU.

5. How can I replace a failed PDU?

Download the guide below to replace the PDU: <https://lp.schroff.nvent.com/en/rackpower-support>

< 8.5 > OUTLET CONTROL MODULE

6. What does the outlet LED mean for RP2000 / RP3000 switched PDU?

LED in Solid Blue: Outlet ON

LED Not lit : Outlet OFF

7. How do the outlets react when the user powers up the RP2000 / RP3000 switched PDU?

First, all outlets will return to power OFF status within 5 seconds.

Then, all outlets power ON sequentially.

8. Why is the outlet LED not lit but the outlets still ON power status?

The outlet LED is defective.

< 8.6 > TH SENSORS & OTHERS

TH sensors

1. How accurate is the Temp. & Humid. sensor?

± 1°C (typical) & ± 4.5% RH (typical)

2. How accurate is the Temp. sensor?

± 1.5°C (typical)

3. What is the default TH setting?

Default: Deactivate

4. Is the TH sensor plug-n-play?

Yes, but only for the local meter display.

No, for management software UI. You have to activate the sensor in < TH Sensor >.

Note: never activate if no sensor connection

Others

1. Will the PDU settings remain unchanged after power OFF?

Yes, the settings will remain unchanged such as PDU & Outlet Name, Location, Alarm amp., Low alert amp.

2. Does the RackPower PDU have the over ampere protection?

Yes, the optional resettable fuse and circuit breaker available.

3. What is the standard inlet cable length of RackPower PDU?

3 meter (9.9 feet)

4. Where can I find the Catalogue / User manual / Model list / Wire diagram of RackPower PDUs?

Please visit the www.nVent.com

5. How can we get a further support?

Please send the email to <https://lp.schroff.nvent.com/en/rackpower-support>
